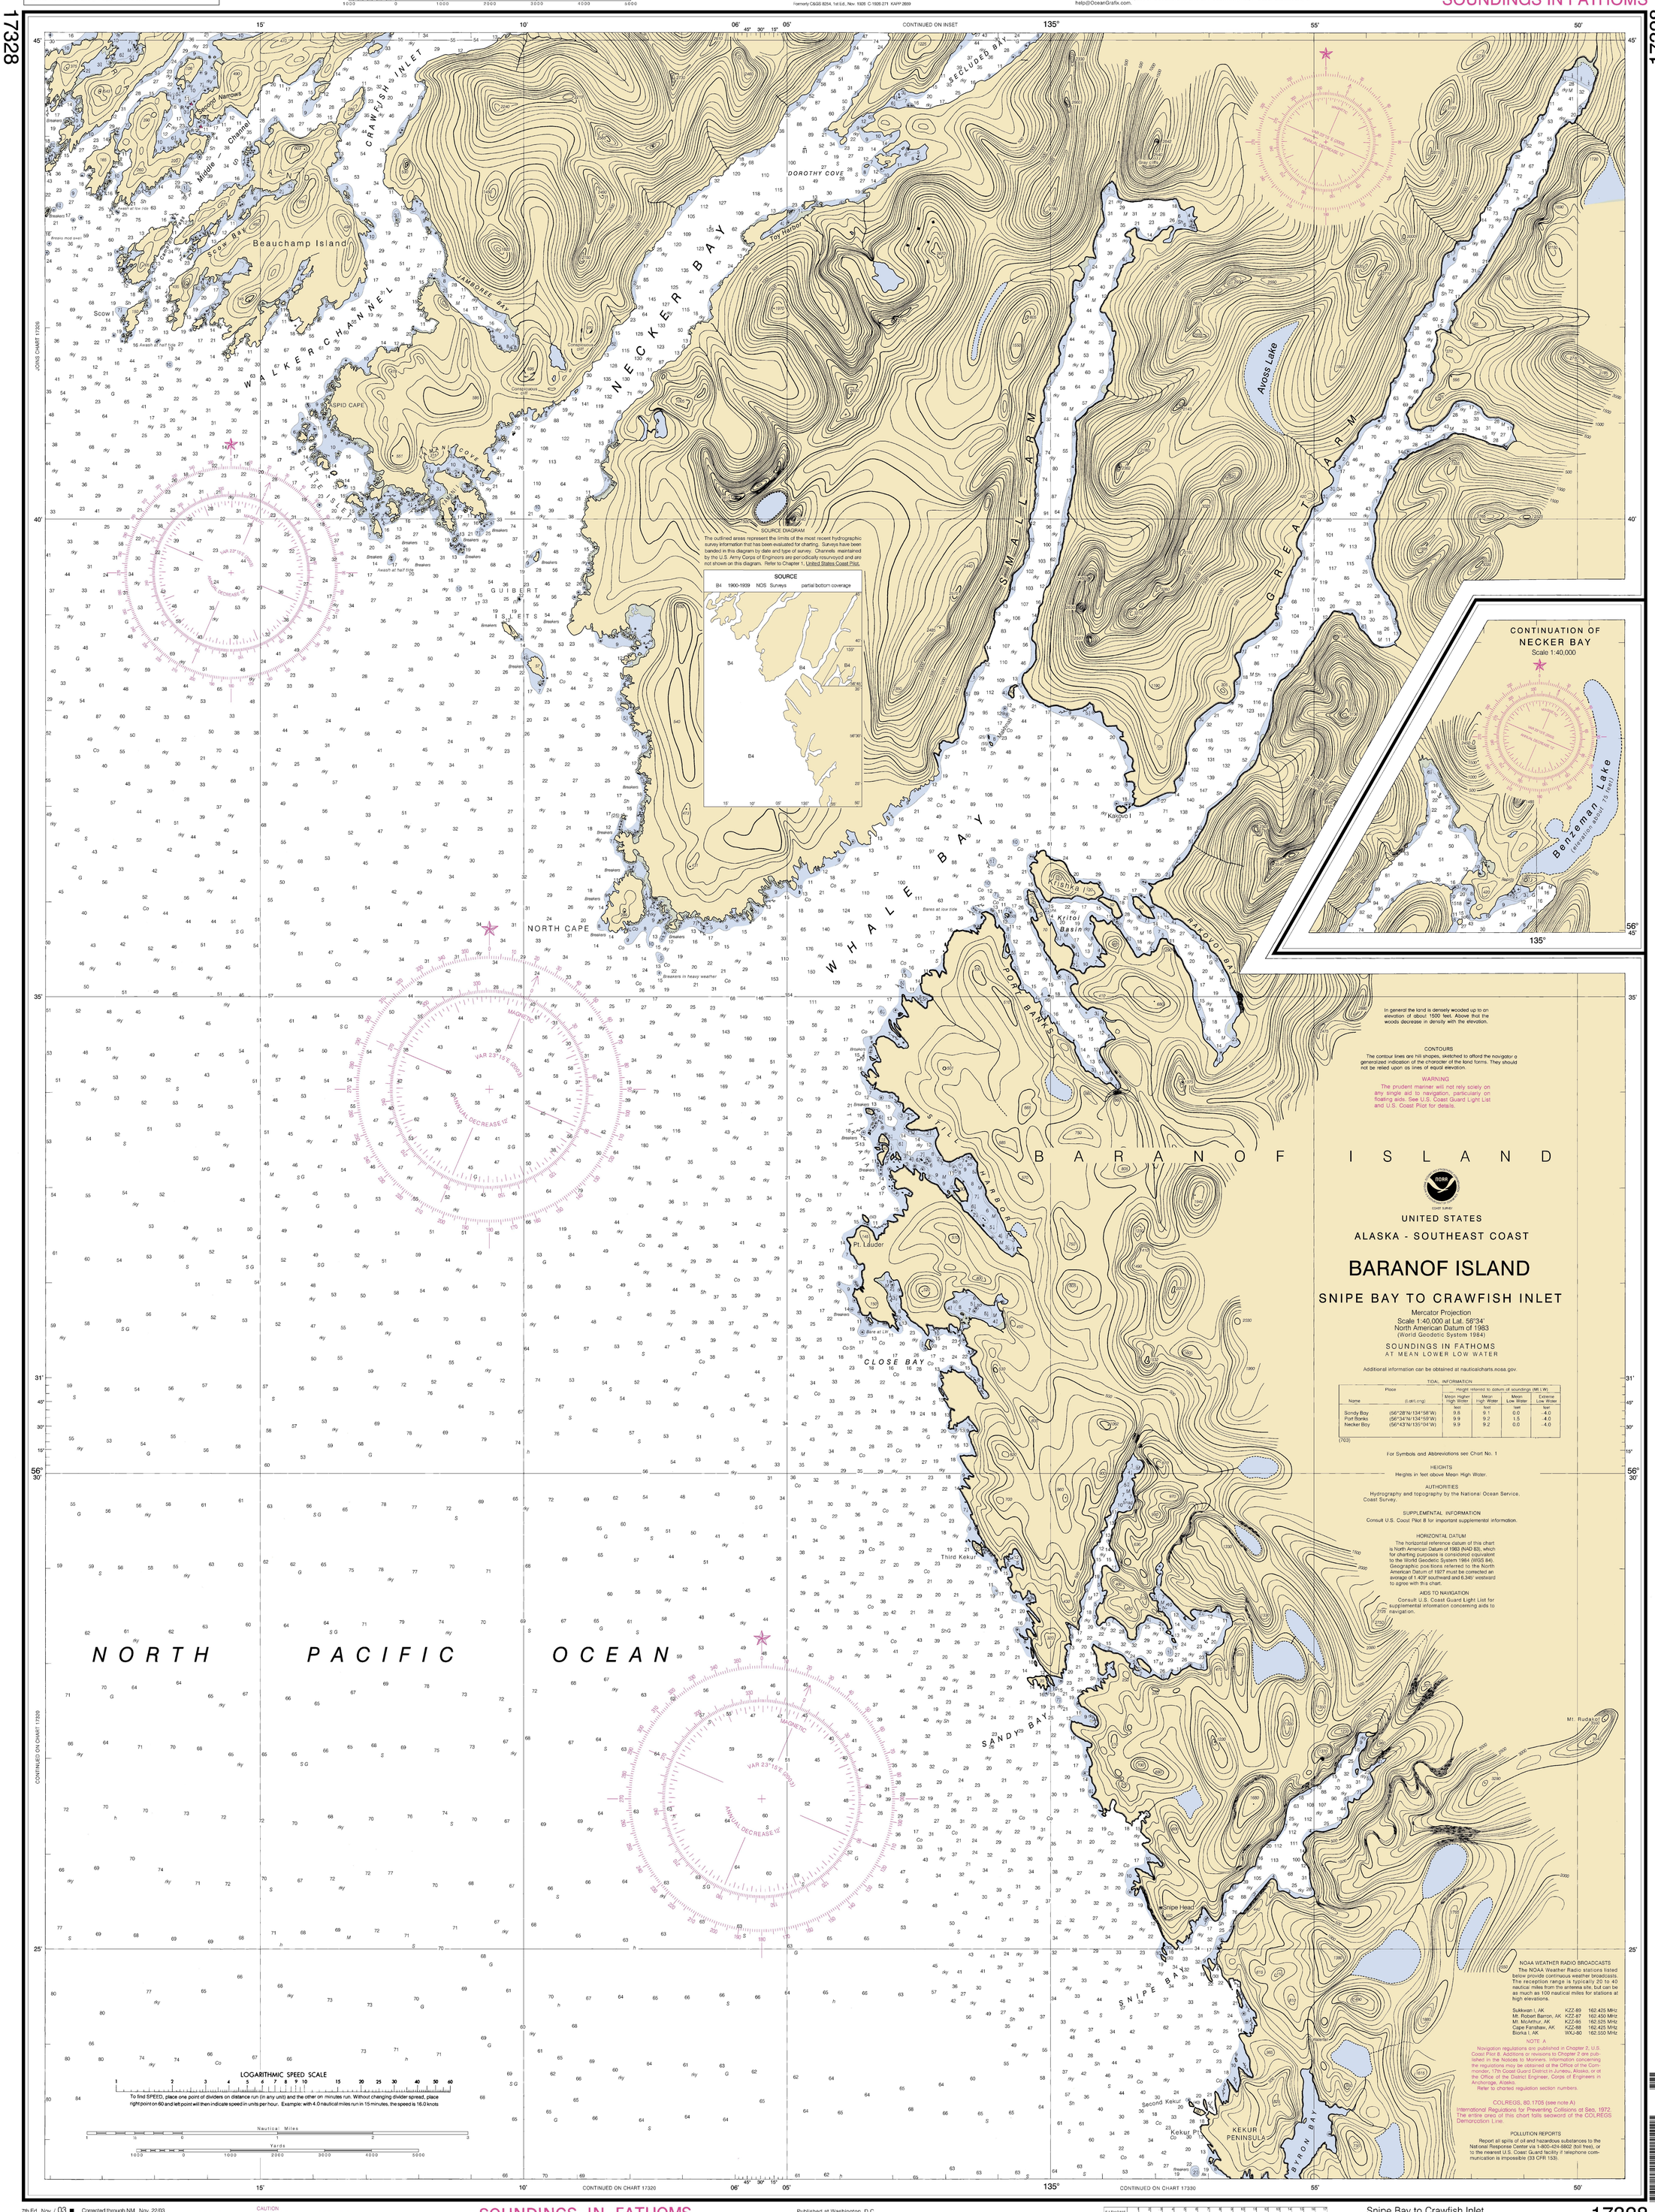
SOUNDINGS IN FATHOMS

17328



In general the land is densely wooded up to an elevation of about 1500 feet. Above that the woods decrease in density with the elevation.

CONTOURS
The contour lines are hill shapes, sketched to afford the navigator a generalized indication of the character of the inland forms. They should not be relied upon as lines of equal elevation.

WARNING
The prudent mariner will not rely solely on any single aid to navigation, particularly on floating aids. See U.S. Coast Guard Light List and U.S. Coast Pilot for details.
