People, Land & Water can be found on Interior's homepage at http://www.doi.gov/doi_plw.html

Our point is this: Volcanic eruptions that blow away forests, bury towns, and bring down airliners are not fictional, despite current cinematic creations. Hollywood learned of these awesome forces from the experts—USGS scientists whose intensive studies, often carried out under dangerous conditions, are helping communities to save lives and reduce the hazards from these destructive but inevitable natural eruptions. Story, pages 8-9.

Finishing Touches

Workmen lay stone tiles for a terrace between the Instructional West Building and the Lab at the Fish and Wildlife Service's new National Conservation Training Center, which is scheduled to officially open this spring. Story, pages 16-17.
