

REPORT TO THE CONGRESS

**RECOMMENDATIONS ON FUTURE
FREE TRADE AREA NEGOTIATIONS**

September 25, 1997

REPORT TO THE CONGRESS ON
RECOMMENDATIONS ON FUTURE FREE TRADE AREA NEGOTIATIONS

Section 108 of the NAFTA implementing legislation (PL 103-182, 107 STAT 2057) requires that the President submit to the appropriate Congressional committees a report containing recommendations on future free trade area negotiations. More specifically, the report is to contain: (a) recommendations for free trade area negotiations, if any, with any foreign country identified in a report submitted on May 1, 1997, by the U.S. Trade Representative; (b) specific negotiating objectives that are necessary for this purpose; and (c) legislative proposals to ensure adequate consultative and approval arrangements with the Congress. This report is designed to fulfill this requirement.

Summary

Since the end of the Cold War, trade and economic development have emerged as fundamental strategic issues. The strength and prosperity of the United States depends increasingly on our ability to create and maintain trade relationships that are beneficial to us and to our trading partners. We must, therefore, continue to identify those markets that present growth opportunities, ensure access to those markets, and do so in such a way as to create enduring relationships that foster not only short-term economic prosperity, but also our long-term economic security. These relationships promote stability and prosperity so that our trading partners will also be partners in the pursuit of security and peace, and will join us in combating common cross-border threats such as drug trafficking, international crime, and terrorism.

As was true when we issued the July 1, 1994 report under Section 108, we remain committed to completing a comprehensive trade agreement with Chile. We are similarly committed to maintain the momentum necessary to conclude the Free Trade Area of the Americas (FTAA) by no later than 2005, with concrete progress by the turn of the century, in accordance with the Miami Summit Declaration. While the Administration has not, at this time, targeted any other free trade area negotiations, we are open to considering additional arrangements, particularly where they would advance our trade, foreign policy and other important national priorities. For example, we have embarked on an initiative to support Africa's march toward political and economic reform and open markets. In the future, free trade agreements may be negotiated with certain reform-minded African countries, as well as with countries in other regions.

This report, like the May 1, 1997 report, covers all regions of the world and selected countries. As in the May 1 report, the Latin America and the Caribbean and Asia-Pacific regions are discussed in some detail. These regions are experiencing the fastest economic growth in the world and have been a major focus of recent regional U.S. trade policy efforts.

Priority Countries and Regions

Latin America and the Caribbean

The May 1, 1997 report addressed the impressive growth we have seen during this decade in U.S. exports to Latin America and the Caribbean. This growth is a result of fundamental and dramatic changes in economic, fiscal and trade policies in the countries of the region. Since our July 1994 report, these policy changes have gained momentum. The countries of the region are abandoning the protectionism and heavy government intervention of the past for market-oriented policies that will increase their ability to compete in the global economy. They have been reducing their tariff and non-tariff barriers, through the implementation of their Uruguay Round obligations, as well as through unilateral reductions. State-owned enterprises are being privatized; laws on intellectual property protection are being modernized; and macroeconomic reforms and realistic exchange rate regimes have been introduced.

The greater openness of Latin American economies has stimulated a resurgence of activity toward economic integration in the region, and this activity has been expanding in scope and intensity. In fact, no region of the world has a more active agenda of free trade agreement (FTA) negotiations than Latin America. At the sub-regional level during the past year we have witnessed, for example, the conclusion of the Chile-Canada FTA, the MERCOSUR-Chile FTA, the MERCOSUR-Bolivia FTA, and the initiation of negotiations between Mexico and MERCOSUR, Mexico and Peru, Mexico and Ecuador, MERCOSUR and most of the Andean Community, Panama and Chile, Mexico and the Northern Triangle of Central America (Guatemala, El Salvador and Honduras), and between Central America and the islands of the Caribbean. Furthermore, our traditional trading partners are seized by the opportunities that exist to expand trade with Latin America. The European Union (EU) has launched with Mexico, MERCOSUR and Chile talks aimed at concluding a reciprocal trade agreement to eliminate substantially all barriers to trade. Chile and the EU have agreed on a target date of 1999 to conclude such an agreement.

While such sub-regional agreements can contribute both to hemisphere-wide liberalization and to multilateral liberalization in the WTO, the expansion of these sub-regional preferential trade arrangements could put many American and other non-member suppliers at a disadvantage in such markets compared to suppliers from member countries, even when the arrangements are consistent with the WTO. In fact, any time a trade agreement is concluded that reduces barriers among the parties, and those parties do not include the United States, U.S. producers are put at a competitive disadvantage in that market. U.S. exporters are discovering every day the real and growing commercial costs of U.S. non-participation in these ongoing trade negotiations.

An additional danger of such FTA's proceeding without U.S. involvement is that they may begin to address non-tariff issues in ways incompatible with U.S. interests. Thus far, the FTAs in the hemisphere, other than NAFTA, are essentially tariff elimination arrangements. They are not yet comprehensive agreements that cover other trade and trade-related measures, such as government procurement, investment, intellectual property protection (IPR), sanitary and phytosanitary

measures, product standards, and services. It would be beneficial, therefore, to develop region-wide disciplines in these areas and shape them in America's interests before others seize the initiative and shape the rules of trade.

Moreover, our ability to engage outward-looking countries in negotiations -- either in the FTAA or bilaterally -- can solidify the movement toward the open trade policies that we espouse and practice. Central American leaders, for example, have communicated their willingness to build their trade relationship with the United States on the basis of reciprocal market opening. Similarly, the interest in proceeding with the FTAA remains real as evidenced by the Trade Ministers agreeing at Belo Horizonte, Brazil in May 1997 to recommend that their leaders initiate negotiations of an FTAA at their next Summit of the Americas to be held in Santiago, Chile in April 1998.

In light of the growth opportunities that exist in the region, and the prospects for promoting economic prosperity and stability in our hemisphere, we recommend the following free trade area negotiations:

Chile: We remain fully committed to negotiating a comprehensive free trade arrangement with Chile. Chile continues to pursue the democratic, open market policies we seek to reinforce throughout the hemisphere. Chile is aggressively pursuing trade agreements and has recently completed an "association" free trade agreement with MERCOSUR and a comprehensive free trade agreement with Canada. An agreement with Chile would be the first step in building the FTAA.

Free Trade Area of the Americas: Since the Summit of the Americas in Miami in December 1994, the trade Ministers of the 34 democratic countries of the hemisphere have been meeting annually to prepare for the negotiation of the FTAA. The Miami Summit Declaration and Plan of Action provide the overall framework for the construction of the FTAA. It included the following commitments by all 34 Leaders:

- balanced and comprehensive agreements to maximize market openness through high levels of discipline covering, *inter alia*, tariffs; non-tariff barriers (NTBs) in goods and services; agriculture; subsidies; investment; intellectual property rights (IPR); government procurement; product standards; safeguards; rules of origin; anti-dumping and countervailing duties (AD/CVD); sanitary and phytosanitary (SPS) procedures; dispute settlement; and competition policy;
- concrete progress by the turn of the century;
- to further secure the observance and promotion of workers' rights; and
- to make our trade liberalization policies and our environmental policies mutually supportive.

At the Denver Trade Ministerial in June 1995, the 34 countries agreed that the FTAA will be an undertaking in which all countries will assume all of the obligations of the FTAA.

It also was agreed at Denver that the FTAA will be WTO-consistent. Thus, the FTAA will have the WTO obligations as its baseline.

The FTAA, however, needs to go beyond the WTO and be future-oriented. It must be responsive to new technologies and new ways of doing business, and it should draw from the best, most appropriate practices in the sub-regional arrangements. In other words, we aim for the FTAA to be "the state of the art" in trade and investment agreements when it is concluded.

The Third FTAA Trade Ministerial, which took place in Belo Horizonte, Brazil in May 1997, set out a very clear work plan for the FTAA countries in the coming year to enable our leaders to initiate negotiations on the full range of issues included in the Miami Declaration and Plan of Action. More specifically, the Ministers created a Preparatory Committee of Vice Ministers to prepare recommendations on how the FTAA negotiations should proceed -- including objectives, approaches, structure and venue -- for decision by the Ministers at their next meeting in San Jose, Costa Rica in March 1998. We will need the advice of the Congress and the various economic interests in our society to help us define our objectives and priorities in the FTAA negotiations.

Asia Pacific Region

The Asia-Pacific region, as defined by membership in the Asia Pacific Economic Cooperation (APEC) forum, continues to be a primary focus of U.S. trade policy efforts. This region, and in particular the developing and newly industrialized economies of East Asia, continues to be one of the fastest growing regions in the world, and already accounts for 62% of U.S. exports. Moreover, though Asia Pacific trade has accounted for over half of U.S. total trade for several years, trade and economic ties with APEC countries continue to grow in importance. U.S. exports to the developing economies of Asia, for example, grew 30% between 1994 and 1996, reaching \$102 billion. While imports were flat, U.S. exports to the seven members of ASEAN (Brunei, Indonesia, Malaysia, Philippines, Singapore, Thailand, and Vietnam) alone grew by 13% in 1996, reaching nearly \$43 billion and making ASEAN collectively our fourth largest trading partner.

Though there are still formidable barriers to trade and investment in the APEC region, there is also a strong impetus to reduce barriers in the region. A number of APEC economies are pursuing unilateral economic liberalization and deregulation programs. These are buttressed by the APEC decision, taken in November 1994, to achieve "free and open trade and investment" in the entire region in the early years of the next century.

Economic integration of the APEC region will continue with or without active U.S. participation and leadership. Economic growth in the region has always been presaged on growth in trade, and Asia Pacific countries will continue to actively explore ways of expanding that trade. ASEAN countries are already actively engaged in a regional effort to expand trade and integrate their economies. Other large economies in Asia, such as Japan, Korea, China and Taiwan, are similarly engaged in aggressively expanding their trading networks and opportunities. A failure by the United States to participate in and shape these efforts could significantly diminish the

opportunities for U.S. firms and workers as we enter what some are calling the “Pacific century.” As in the case of Latin America, we also could be disadvantaged by exclusionary subregional preferential trade arrangements.

Thus, the United States has been pursuing an activist trade policy in the Asia Pacific region aimed at further opening these fast growing markets, and expanding opportunities for American companies and workers. The United States has played a pivotal role in shaping APEC, committing in 1994 in principle to free and open regional trade. Since then, APEC has taken important steps toward implementing that commitment, including the pursuit of liberalization in key sectors. Thus, with U.S. leadership, APEC’s strong endorsement of the Information Technology Agreement (ITA) in November 1996 gave critical impetus to the successful conclusion of the ITA at the WTO. Similarly, the active participation of key Asian economies in the WTO basic telecommunications agreement was secured with a strong push from APEC. Finally, building on these successes, APEC trade ministers in May 1997 agreed on an expedited program to explore market opening in other key sectors. Ministers also endorsed active participation in the WTO financial services negotiations to be concluded by December 1997.

Bilateral FTAs between the United States, the largest APEC economy, and other APEC economies, in particular ones with a proven commitment to open trade, could be a catalyst to opening the entire region, accelerating market access opportunities for U.S. exports, and fulfilling the APEC mandate. While we do not recommend specific FTA negotiations at this time, the Administration will consider such agreements in the context of fulfilling its broader objective of opening and expanding markets in this dynamic region, and advancing its security interests in this strategically important area.

Africa

In the case of Africa -- a region rich in resources and potential -- nations that are making dramatic strides toward democracy and prosperity should be engaged. As African economies grow, America’s prosperity and security will benefit. Many nations are embracing economic and political reforms, privatization, and open markets. We intend to work closely with reform minded African nations to promote these goals. We will be prepared to negotiate free trade agreements with countries that have successfully implemented reforms to further integrate them into the international trading system when we and they agree that it is mutually advantageous to do so.

Europe and the Middle East

The Leaders at the United States-European Union Summit in December 1995 recognized the major advantages from expanding trade between their two regions, which were already each other’s largest market for goods and services. In 1995 two-way trade in goods and services amounted to more than \$360 billion, and the United States and the EU accounted for one-half of each other’s outward foreign direct investment flows. While the Leaders did not envisage a free trade agreement (FTA), they agreed to create the New Transatlantic Marketplace (NTM) “...by progressively reducing or eliminating barriers that hinder the flow of goods, services and capital between us.” They commissioned a “joint study” to examine how best to achieve this objective. Because U.S. and EU tariffs are already very low, attention has been focused primarily on non-

tariff barriers. The recently concluded U.S.-EU Mutual Recognition Agreement illustrates the type of progress envisaged under the NTM.

The European countries have very active programs for negotiating FTAs. The major group with which the EU has FTAs is the European Free Trade Association (EFTA) -- Iceland, Liechtenstein, Norway and Switzerland. Both the EU and EFTA have been negotiating free trade agreements with many of the countries of Central and Eastern Europe and the Mediterranean. The EU has signed association agreements and other types of free trade arrangements with the Czech Republic, Slovakia, Hungary, Poland, Bulgaria, Romania, Latvia, Lithuania, Estonia, Albania, Slovenia, Israel, Algeria, Morocco, and Tunisia. The EU has also negotiated a customs union with Turkey. Among other things, these arrangements provide for phased-in free trade in a number of sectors, notably excluding the agricultural sector, between the respective countries and the EU. EFTA has negotiated free trade agreements with Romania, Hungary, Bulgaria, the Czech Republic, Slovakia, Turkey, Israel, Poland, Slovenia, and Albania. Furthermore, six central European countries are members of the Central European Free Trade Agreement, three countries (Estonia, Latvia, Lithuania) are joined in the Baltic Free Trade Agreement, and the New Independent States have free trade among themselves.

While the main obstacles to trade in the EU are non-tariff barriers, many of the Central European countries, the New Independent States and Russia retain high tariffs. As these countries enter FTAs or association agreements, the tariff preferences enjoyed by firms in the EU and EFTA members could become a more significant problem for U.S. exporters. We will, therefore, continue to examine the impact of these preferences on U.S. exports.

With respect to the Middle East, economic growth in the region supports our national security objectives and generates markets for U.S. exports. Increasing trade levels will be essential if these economies are to generate jobs, know-how and prosperity. Regional leaders have grasped this reality and are lowering trade barriers and negotiating free trade agreements with the EU. Measures to lower barriers to U.S. trade in the region will reinforce these efforts, and will increase U.S. exports. Moreover, closer bilateral trade relations with reform-minded countries in the region would signal U.S. support for economic reform efforts underway in the region.

Specific Negotiating Objectives

In general, the Administration's negotiating objectives for the kinds of agreements described in this report are really a subset of the negotiating objectives contained in our proposal for renewed trade agreement authority and fast track procedures.

However, as we are not now engaged in formal FTA negotiations, we have not identified "specific negotiating objectives" for any potential agreement. Specific negotiating objectives would be developed, in consultation with Congress, as part of commencing formal negotiations towards reaching such an agreement. They will vary depending on the particular arrangement being negotiated.

As noted above, our overall goal is to reduce barriers to trade and open markets for U.S. goods and services, and, at the same time, create enduring relationships that foster not only short-term economic prosperity, but our long-term economic security. Where a comprehensive agreement with a country or countries is consistent with those general goals, we believe we should explore whether agreements could be reached that would, in fact, advance our trade, foreign policy and other important national interests.

Legislative Proposals

In addition to negotiating objectives, the Administration's legislative proposal contains specific notice and consultations provisions. These procedures would apply to any agreements described in this report that would need legislation in order to be implemented by the United States.

The proposal provides the President authority to implement by proclamation certain limited categories of tariff reduction agreements. In particular, the proposal provides the President with authority to reduce U.S. tariffs that are above 5 percent *ad valorem* up to 50 percent. The President would be able to eliminate duties set at 5 percent *ad valorem* or less. In addition, the proposal provides for the application of fast track procedures to bilateral, regional or multilateral agreements entered into by the President that reduce additional tariff barriers as well as non-tariff barriers.

The proposal requires extensive consultation with the Congress for agreements subject to fast track procedures. The President would have to provide Congress with written notice of his intention to enter into negotiations at least 90 days before doing so. The proposal also requires that, before and after submission of the notice, the President must consult with the House Committee on Ways and Means, the Senate Finance Committee and other relevant Congressional committees. The President would be required to identify his negotiating objectives and any related agreements that may be entered into.

Furthermore, the President would have to notify the House and the Senate of his intention to enter into an agreement at least 90 days in advance of signing it and, prior to entering into an agreement, the President would be obligated to consult with the House Committee on Ways and Means and Senate Finance Committee, as well as any other Congressional committees that have jurisdiction over issues that would be affected by the agreement. Congress would be able to rescind fast track if the President has not consulted adequately.
