# Pulpwood Production in the North-Central Region, 2004

**Ronald J. Piva**

*NOTE: This report includes all primary products made from reconstituted wood fiber. In addition to wood pulp, this includes particleboard and engineered lumber products made from chips, shavings, wafers, flakes, strands, and sawdust. This report presents the production of the raw fiber material delivered to mills. Thus, these data report only that portion of the timber harvest used as raw material and do not necessarily reflect the volume of growing stock harvested.*

Pulpwood constitutes more than half the industrial timber products harvested annually in the Lake States (Michigan, Minnesota, and Wisconsin) and is an important product in the Central States (Illinois, Indiana, Iowa, and Missouri) and the Plains States (Kansas, Nebraska, North Dakota, and South Dakota).

Current detailed information about pulpwood production<sup>1</sup> is necessary for intelligent planning and decisionmaking in wood procurement, forest resource management, forest industry development, and scientific studies.

Since 1979, logs, bolts, and wood residue used in manufacturing flakeboard, waferboard, oriented strandboard, and medium density fiberboard have been included in this annual report. Engineered lumber was first included in this report in 1992. Together, these products are called particleboard, and all mills manufacturing these boards are called particleboard mills in this report. Wood used at particleboard mills is identical or nearly identical to wood used at pulp mills; therefore, including this wood in our

study provides a more accurate estimate of demand for pulpwood-like material.

Particleboard mills were in their infancy before 1979 and used primarily aspen and wood residue. Therefore, data for these mills do not distort roundwood use trends for other species or preclude comparing 2004 survey results with those of 1978 and previous years.

Pulp and particleboard mills using timber from the North Central States in 2004 reported their pulpwood receipts<sup>2</sup> by species group and county of origin. This report presents the results of the survey, analyzes the data, compares results with those of 2003 and earlier years, and discusses trends in pulpwood production and use.

The Lake States, Central States, and Plains States are discussed separately because the timber types in each area are different, the flow of wood between the areas is nominal, and more detailed data on pulpwood production and receipts in the Central and Plains States might reveal the operations of individual mills. This is the 46th

**Ronald J. Piva,**  
Forester, received a  
B.S. in forest management from the  
University of Missouri-Columbia. He joined the Forest Service in 1987 and has been working with the North Central Station's Forest Inventory and Analysis unit since.

<sup>1</sup> Pulpwood production, determined from mill receipts, is the annual volume of pulpwood cut, plus the annual wood residue volume produced by sawmills, veneer mills, etc. used for pulp, particleboard, waferboard, oriented strandboard, medium density fiberboard, or engineered lumber.

<sup>2</sup> Pulpwood receipts are the volumes of wood received by mills in a specific State or region, regardless of the geographic source.

annual report of the pulpwood harvest in Lake States counties, the 45th annual report of the Central States harvest, and the 12th report of the pulpwood harvest in the Plains States.

Several mills purchase their pulpwood based on weight rather than volume. Factors used to convert green tons of pulpwood to standard cord equivalents are shown in the appendix.

When new surveys are completed, errors and omissions from previous surveys are corrected. As a result of our ongoing efforts to improve the survey's efficiency and reliability, changes may have been made to the previous survey's data. All comparisons and analysis in this report are based on the reprocessed data from earlier surveys, which may not match earlier published data.

## LAKE STATES

### PRODUCTION

- Pulpwood production in the Lake States rose from 9.5 million cords<sup>3</sup> in 2003 to 9.8 million cords in 2004, an increase of more than 3 percent. Overall, 90 percent came from roundwood (including chips from roundwood) and 10 percent came from the residue<sup>4</sup> of wood-using plants.
- Aspen remained the dominant species harvested for pulpwood in the Lake States in 2004 with 3.6 million cords or 41 percent of the total roundwood. Other important species harvested for pulpwood in 2004 were soft maple (937 thousand cords), hard maple (883 thousand cords), white birch (629 thousand cords), jack pine (517 thousand cords), and balsam fir (324 thousand cords) (table 1 and fig. 1).

<sup>3</sup> All references to cords are in standard cords. A standard cord is 128 cubic feet of wood, bark, and air space.

<sup>4</sup> Residue is the byproduct from sawmills, veneer mills, cooperage mills, and other wood-using mills that is used for pulping and particleboard. Residues

- Softwood roundwood production remained at 1.7 million cords. Pulpwood production from softwood residues increased by more than 12 percent to 511 thousand cords in 2004.
- Hardwood roundwood production increased by almost 5 percent, for 6.8 million cords in 2003 to 7.1 million cords in 2004. From 2003 to 2004, pulpwood production from hardwood residues decreased by almost 12 percent.
- Whole-tree chip<sup>5</sup> (WTC) production, at 799 thousand cords, made up 8 percent of the total pulpwood production in the Lake States in 2004—an increase of more than 40 percent from 2003 (fig. 2).
- Aspen was the predominant species used in WTC in 2004 with 252 thousand cords or 32

include slabs, edgings, veneer cores, sawdust, fines, woodflour, and chips manufactured from slabs, edgings, and veneer cores.

<sup>5</sup> Pulpwood produced from chipping entire trees (all portions of the trees above ground, except the stumps).

Figure 1.—Lake States pulpwood production by species group and residues, 2003–2004.

Figure 2.—*Whole-tree chip production in the Lake States, 2000-2004.*

percent of the total WTC production. Jack pine, at 109 thousand cords, was the predominant softwood species used in WTC in 2004 and accounted for 14 percent of the total WTC production.

- Michigan was the major producer of WTC in the Lake States in 2004 with 487 thousand cords (61 percent of the WTC production) (fig. 3).

### **Michigan**

- The total output of wood material for pulpwood production in Michigan increased by 4 percent, from 3.0 million cords in 2003 to 3.1 million cords in 2004. Pulpwood production from roundwood increased by 6 percent while

production from residues decreased by almost 9 percent (fig. 4 and tables 2 and 3).

- The Western Upper Peninsula remained the top pulpwood-producing region in the State in 2004 with 39 percent of the total roundwood harvested (fig. 5 and tables 4 and 5).

### **Minnesota**

- Pulpwood production increased by 76 thousand cords, almost 3 percent, between 2003 and 2004. Roundwood pulpwood production increased by almost 2 percent, and pulpwood produced from mill residues increased by more than 23 percent (fig. 6).

Figure 3.—*Whole-tree chip production by State in the Lake States, 2004.*

Figure 4.—Michigan pulpwood production by species group and residues, 2000-2004.

Figure 5.—Michigan roundwood pulpwood production by Forest Survey Unit and species groups, 2004.

Figure 6.—Minnesota pulpwood production by species group and residues, 2000-2004.

- Aspen accounted for 62 percent of all the roundwood harvested for pulpwood in Minnesota in 2004.
- The Aspen-Birch and the Northern Pine Forest Survey Units were the top pulpwood-producing roundwood regions in the State in 2004, each supplying 1.3 million cords of roundwood for pulp (fig. 7 and table 6).

## Wisconsin

- Pulpwood production in Wisconsin increased by 4 percent, from 3.5 million cords in 2003 to 3.7 million cords in 2004. Pulpwood production from roundwood increased by 4 percent, and production from residues increased by 2 percent (fig. 8).

Figure 7.—*Minnesota roundwood pulpwood production by Forest Survey Unit and species group, 2004.*

Figure 8.—*Wisconsin pulpwood production by species group and residues, 2000-2004.*

- The Northwestern and Northeastern Forest Survey Units remained the top producers of roundwood for pulping in the State with 1.3 million cords and 1.2 million cords, respectively (fig. 9 and table 7).

## Harvesting Intensity

- In the following figures, the distribution of the harvest is shown in two ways: first, the amount of pulpwood cut relative to the growing-stock volume in each of five major pulpwood species (fig. 10); second, the amount of pulpwood relative to commercial timberland area (fig. 11).

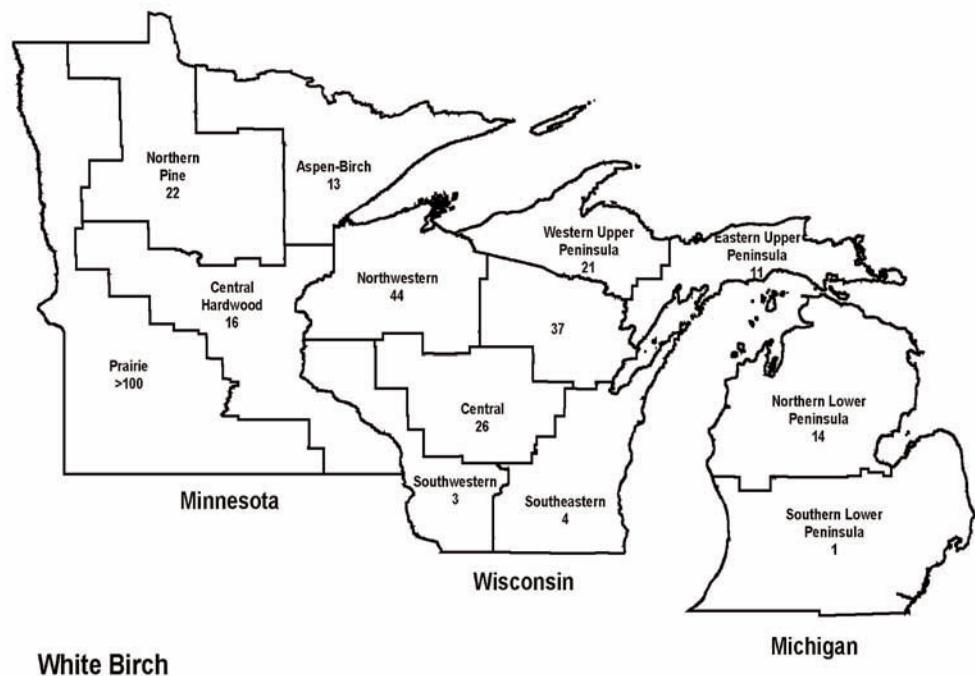

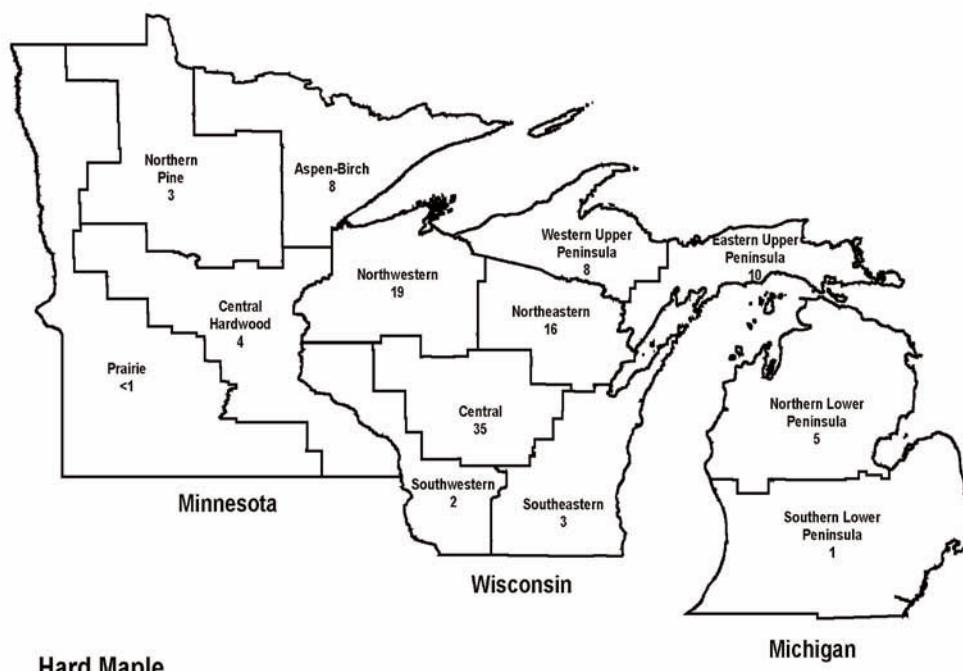

Figure 9.—Wisconsin roundwood pulpwood production by Forest Survey Unit and species group, 2004.

Figure 10.—Cords of roundwood pulpwood (including chips from roundwood) harvested per 1,000 cords of growing-stock volume for each of five principal pulpwood species by Forest Survey Unit, 2004.

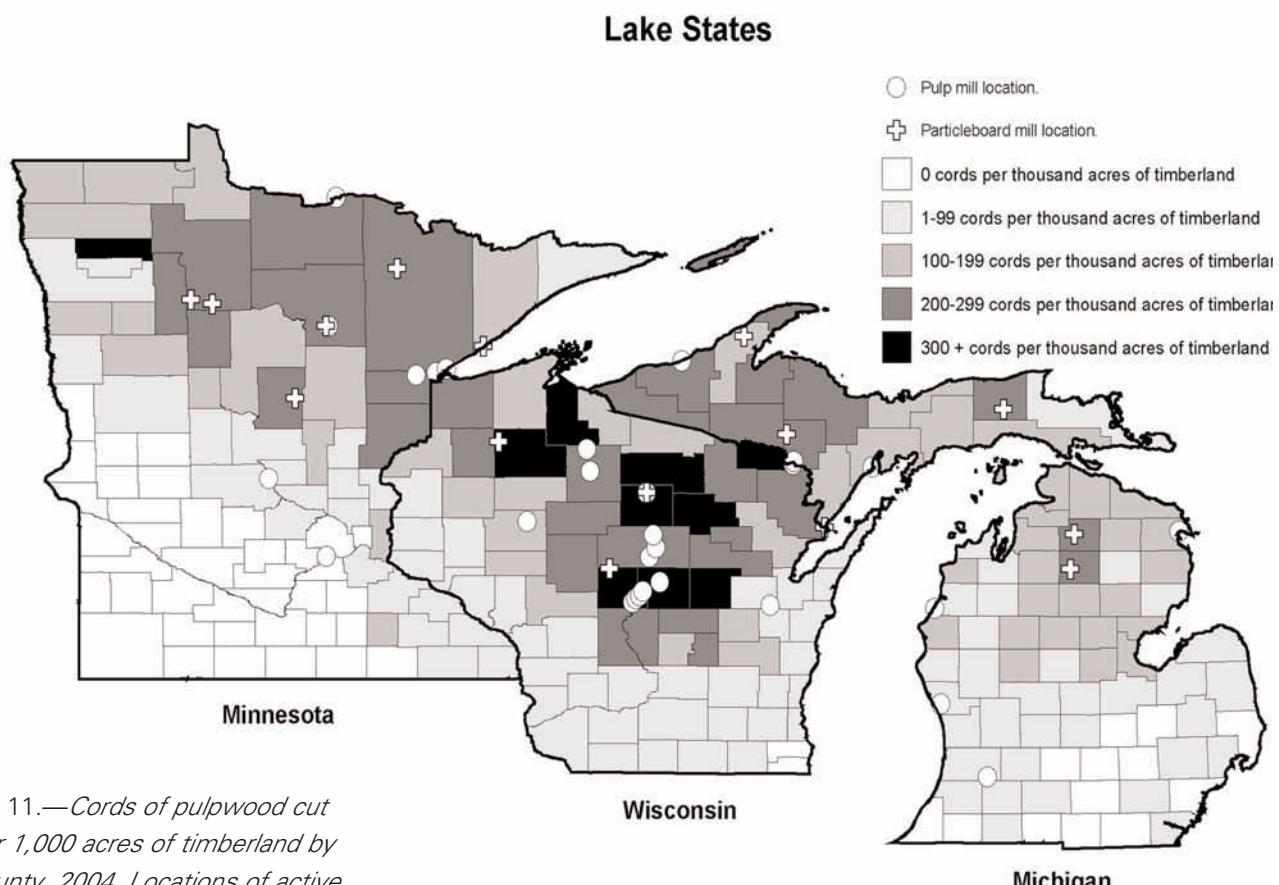

Figure 11.—*Cords of pulpwood cut per 1,000 acres of timberland by county, 2004. Locations of active pulp and particleboard mills are shown.*

## RECEIPTS

- In 2004, 29 wood pulp and 15 particleboard mills in the Lake States acquired 10.2 million cords of pulpwood, an increase of 3 percent from the year before. Aspen roundwood was processed at 35 of the 44 pulp and particleboard plants in 2004 (table 8).
- In 2004, Michigan supplied wood to 35 mills, Wisconsin supplied 34 mills, and Minnesota supplied 24 mills.
- Imports of roundwood to Lake States pulp and particleboard mills increased by 5 percent, while mill residue imports decreased by 15 percent between 2003 and 2004. Total imports of all wood material in 2004 were 484 thousand cords, an increase of 3 percent from 2003. Canada contributed 94 percent of the total imports.

## Michigan

- The seven Michigan pulp mills, three OSB mills, one particleboard mill, and one molded strandwood mill consumed almost 3.1 million cords in 2004, just 12 thousand cords more than in the previous year. Twelve percent of the total wood material consumed was imported from out of State. Wisconsin supplied 70 percent of the imported wood material.

## Minnesota

- The eight pulp mills, five OSB mills, and one laminated structural lumber mill in Minnesota consumed 3.5 million cords in 2004, an increase of almost 4 percent from 2003. Pulp and particleboard mills in Minnesota acquired 19 percent of their raw material from out-of-State sources. Wisconsin supplied almost half of the imported wood material.

## Wisconsin

- The 14 pulp mills, 2 OSB mills, and 2 particle-board mills in Wisconsin consumed 3.6 million cords in 2004, an increase of 5 percent from 2003. Almost 15 percent of the total receipts were imported. Of the total wood material imported, 55 percent was brought in from Michigan.

## INDUSTRY TRENDS AND ANALYSIS

### Pulp Mills

For this section, pulp mill products include wood fiber products such as paper, paperboard, hardboard, insulation board, and medium-density fiberboard. All of these products are manufactured from wood that has been reduced to individual fibers, small fiber bundles, or fiber parts that are subsequently formed into a mat. Wood material from the Lake States sent to mills in other States and Canada is included.

- Of the 9.8 million cords of pulpwood produced in the Lake States in 2004, 7.1 million cords (72 percent) were used for wood pulp products. Overall, 88 percent came from roundwood and 12 percent came from mill residues.
- Principal species harvested for pulp in the Lake States in 2004 were aspen (1.8 million
- cords), hard maple (843 thousand cords), soft maple (834 thousand cords), and white birch (501 thousand cords) (fig. 12).
- Hardwoods were still the mainstay of the pulp mills in the region in 2004: hardwood roundwood contributed more than 68 percent of total raw material, and hardwood residues supplied another 6 percent.

Figure 12.—  
Pulpwood production in the Lake States for pulp by species group and residues, 2000-2004

Table A.—Lake States pulpwood production for pulp mills during 2000-2004

Product form and species group	Production				
	2000	2001	2002	2003	2004
-----(Thousand cords)-----					
<b>Roundwood</b>					
Softwoods	1,674	1,658	1,500	1,480	1,391
Aspen	2,057	1,707	1,854	1,588	1,768
Other hardwoods	2,385	2,320	2,573	2,744	3,086
Residues	852	804	825	880	832
Total	6,968	6,488	6,753	6,693	7,077

- Hardwood roundwood harvested from the Lake States for pulp mills increased by 12 percent between 2003 and 2004, while Lake States softwood roundwood production decreased by 6 percent. Softwood residues generated by Lake States primary wood-processing facilities, and used by pulp mills, increased by 5 percent, and hardwood residues decreased by almost 15 percent during the same period.
- Average daily wood pulp production in 2004 remained at the 2003 level of 14.7 thousand tons of pulp per day (table 9).
- Lake States pulpwood production for pulp mills during 2000-2004 is shown in table A on the top of this page.

### Michigan

- Michigan produced 2.2 million cords of wood material for wood pulp in 2004, an increase of 4 percent from 2003 (fig. 13).
- Aspen, soft maple, and hard maple were the major pulpwood species groups harvested in the State in 2004. All together, these three species groups accounted for more than 60 percent of the total roundwood harvested.
- Michigan wood pulp mills imported 242 thousand cords of pulpwood, mostly from Wisconsin. Michigan exported almost 380 thousand cords to wood pulp mills in Minnesota, Wisconsin, and Canada.

Figure 13.—  
Pulpwood production in the  
Lake States for  
pulp by State,  
2003-2004.

## **Minnesota**

- Pulpwood production for wood pulp totaled 1.7 million cords in 2004, an increase of almost 8 percent from 2003.
- In 2004, aspen remained the predominant species harvested in the State with 756 thousand cords or almost half of the total roundwood produced. Other major species harvested were spruce with 163 thousand cords and balsam fir with 160 thousand cords.
- Pulp mills in Minnesota imported 537 thousand cords of wood material from Michigan, Wisconsin, and Canada. Minnesota exported 117 thousand cords to pulp mills in Wisconsin and Canada.

## **Wisconsin**

- Pulpwood production for wood pulp products increased by 6 percent to 3.2 million cords in 2004.
- Aspen was the main species harvested with 627 thousand cords. Other major species harvested were hard maple (458 thousand cords), soft maple (409 thousand cords), white birch (273 thousand cords), and red pine (221 thousand cords).
- Wisconsin mills imported 454 thousand cords of pulpwood: 303 thousand cords from Michigan, 93 thousand cords from Minnesota, 3 thousand cords from other States, and 55 thousand cords from Canada. Wisconsin exported 327 thousand cords to Minnesota, 212 thousand cords to Michigan, and 4 thousand cords to other States.

---

## **Particleboard Mill**

*Particleboard is a generic term for a panel manufactured from lignocellulosic material—commonly wood—essentially in the form of particles (as distinct from fibers). These materials are bonded together with synthetic resin or other suitable binder under heat and pressure by a process wherein the inter-particle bonds are created wholly by the added binder. Other materials may have been added during manufacture to improve certain properties. The many types of particleboard differ greatly in the size and geometry of the particle, the amount of resin (adhesive) used, and the density to which the panel is pressed. Products included in the particleboard group include particleboard, waferboard, oriented strandboard (OSB), and engineered lumber. The major types of particles used for particleboard are shavings, flakes, wafers, chips, sawdust, strands, slivers, and wood wool (excelsior). Much of the particleboard in the U.S. is made from residues (shavings, sawdust, or chips). Waferboard, OSB, and engineered lumber are examples of products requiring that the particles be cut from solid wood (saw logs or pulpwood). Wood material from the Lake States sent to mills in other States and Canada is included.*

- The Lake States produced 2.7 million cords of pulpwood in 2004 for particleboard products, down by 2 percent from 2003 (fig. 14).
- Twelve of the fifteen Lake States mills in the particleboard category were OSB or engineered wood product mills that require particles to be cut from roundwood. Hence, for every cord of pulpwood used in particleboard manufacture, 94 percent came from roundwood.
- Principal species harvested for particleboard products were aspen (1.8 million cords), jack pine (233 thousand cords), white birch (128 thousand cords), and soft maple (103 thousand cords).

Figure 14.—Pulpwood production for particleboard in the Lake States, 2000-2004.

- In 2004, the Lake States produced 316 thousand cords of softwood roundwood and 2.3 million cords of hardwood roundwood for processing at particleboard plants. Less than 1 percent of the roundwood harvested in the Lake States for particleboard production was exported to other States.
- The Lake States in 2004 produced 80 thousand cords of softwood residues and 75 thousand cords of hardwood residues for use in particleboard production. Between 2003 and 2004, the use of residues for particleboard production increased by more than 35 percent.
- Annual production at Lake States particleboard plants fell from 2,125 million square feet 3/4-inch basis in 2003 to 2,064 million square feet 3/4-inch basis in 2004 (table 10).
- Lake States pulpwood production for particleboard mills during 2000-2004 is shown in table B.

## Michigan

- The production of wood material for particleboard production in Michigan increased by 3 percent from 2003 to 2004, rising from 891 thousand cords in 2003 to 918 thousand cords in 2004 (fig. 15).
- In 2004, the harvest of roundwood from Michigan forest land provided 823 thousand cords of wood for particleboard products, of which almost 80 percent were hardwoods. Residues from Michigan's primary wood-using mills provided another 95 thousand cords of wood material used to produce particleboard products.

Table B.—Lake States pulpwood production for particleboard mills during 2000-2004

Product form and species	Production				
	2000	2001	2002	2003	2004
(Thousand cords)					
Roundwood					
Softwoods	160	174	149	204	316
Aspen	1,939	1,880	1,938	2,058	1,849
Other hardwoods	374	396	431	426	426
Residues	156	108	129	113	156
Total	2,628	2,558	2,647	2,801	2,747

Figure 15.—  
*Pulpwood production in the Lake States for particleboard by State, 2003-2004.*

- The particleboard mills in Michigan imported 71 thousand cords from Canada and 56 thousand cords from Wisconsin. Almost 35 thousand cords of wood material for particleboard production were exported to Minnesota, Wisconsin, States outside the North-Central Region, and to Canada.

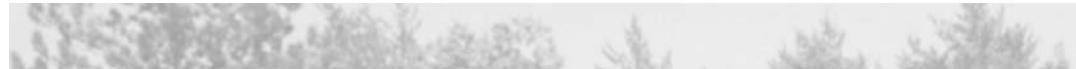

### **Minnesota**

- The production of roundwood for particleboard production in Minnesota decreased by 3 percent, from 1.4 million cords in 2003 to 1.3 million cords in 2004. In 2004, there were no residues from primary wood-using mills in Minnesota that were used in particleboard mills.
- Minnesota accounted for nearly half of all the wood material produced in the Lake States for particleboard plants in 2004. Aspen was the predominant species harvested (1.0 million cords) for particleboard production. White birch, at 102 thousand cords, was the second most important species harvested.
- The particleboard mills in Minnesota imported 123 thousand cords from Canada and almost 23 thousand cords from North Dakota, Wisconsin, and Michigan combined. In 2004,

raw materials exported from the State for particleboard manufacturing totaled 67 thousand cords, all of which went to Wisconsin.

### **Wisconsin**

- The production of wood material for particleboard production in Wisconsin decreased by 7 percent, falling from 516 thousand cords in 2003 to 479 thousand cords in 2004.
- In 2004, there was 418 thousand cords of roundwood harvested from Wisconsin forest land for particleboard manufacturing, of which 17 thousand cords were softwood and 401 thousand cords were hardwood. Wisconsin's primary wood-processing mills provided an additional 61 thousand cords of plant byproducts to the particleboard industry.
- The mills in Wisconsin imported almost 110 thousand cords of wood for particleboard manufacturing: 67 thousand cords from Minnesota, 35 thousand cords from Canada, and 8 thousand cords from Michigan. Wisconsin exported 56 thousand cords to Michigan particleboard mills and 6 thousand cords to Minnesota particleboard mills in 2004.

## CENTRAL STATES

### PRODUCTION

*Because of the limited number of pulp mills in the Central States, detailed county information is not reported to avoid disclosure of individual mill receipts.*

- Pulpwood production in the Central States (Illinois, Indiana, Iowa, and Missouri) increased by 5 percent, from 462 thousand cords in 2003 to 484 thousand cords in 2004.
- Pulpwood production from roundwood harvested in the Central States increased by 10 percent, and pulpwood production from residues from primary wood-processing mills in the Central States increased by 2 percent.
- Wood residues accounted for almost two-thirds of the total wood material produced in the Central States for the pulp and particleboard industry in 2004 (table 11).

- Pulpwood production from softwood roundwood decreased by almost 30 percent from 2003 to 2004, soft hardwood<sup>6</sup> roundwood production decreased by 3 percent, and hard hardwood<sup>7</sup> production increased by 16 percent (table 12 and fig. 16).
- Exports of roundwood and residues from the Central States in 2004 accounted for 78 percent of all wood material produced in the region for pulpwood production. Roundwood exports totaled 166 thousand cords, and the export of residues from primary wood-processing mills totaled 318 thousand cords.
- Loggers harvested pulpwood in 13 counties in Illinois, 16 counties in Indiana, 2 counties in Iowa, and 11 counties in Missouri.
- Pulpwood production from whole-tree chips increased by 8 percent between 2003 and 2004. The 30 thousand cords of whole-tree chips made up 18 percent of the total roundwood produced in the Central States in 2004.

<sup>6</sup> Hardwood species with an average specific gravity of 0.50 or less.

<sup>7</sup> Hardwood species with an average specific gravity greater than 0.50.

Figure 16.—Pulpwood production in the Central States, 2000-2004.

## **Illinois**

- Illinois does not have any primary wood pulp or particleboard mills; consequently, all pulpwood harvested and residues produced by primary wood-processing mills, which are utilized by pulp or particleboard mills, are shipped to plants outside the State.
- Illinois produced 38 thousand cords of pulpwood in 2004, a decrease of more than 13 percent from the previous year (fig. 17 and table 13).
- Illinois supplied 14 percent of the Central States total roundwood produced in 2004. Pulpwood production from residues accounted for 5 percent of the Central States total residue production. Overall, Illinois contributed almost 10 percent of the total pulpwood produced in the Central States.

## **Indiana**

- Pulpwood production increased by 3 percent in Indiana, from 154 thousand cords in 2003 to 159 thousand cords in 2004. Indiana produced almost one-third of the total pulpwood produced in the Central States in 2004.
- Roundwood production increased by almost 16 percent from 2003 to 2004, while residue production increased by only 1 percent.

## **Iowa**

- The total pulpwood produced in Iowa in 2004 was 25 thousand cords, the same as in 2003. The State contributed 5 percent of the total pulpwood produced in the Central States.
- The production of wood material for pulping remained at 2003 levels of 5 thousand cords of roundwood and 20 thousand cords of residues from primary wood processors.

## **Missouri**

- Missouri remained the largest producer of pulpwood in the Central States in 2004 with 52 percent of the regional total or 262 thousand cords. The production of pulpwood in Missouri increased by almost 10 percent between 2003 and 2004.
- Missouri produced 111 thousand cords of roundwood and 151 thousand cords of residues for pulpwood in 2004.
- Missouri exported almost 93 percent of its pulpwood production to mills in the Southern States.

*Figure 17.—Central States pulpwood production by State, species group, and residues, 2004.*

## **RECEIPTS**

*Because of the limited number of pulp mills in the Central States, State receipts are not reported to avoid disclosure of individual mill receipts.*

- Pulp mills in the Central States received 139 thousand cords in 2004, an increase of 29 percent from 2003.
- Roundwood receipts increased by 8 percent, from 29 thousand cords in 2003 to 31 thousand cords in 2004. Residue receipts increased by more than 36 percent, from 79 thousand cords in 2003 to 108 thousand cords in 2004.

## **INDUSTRY TRENDS AND ANALYSIS**

- Average daily wood pulp production for pulp mills in the Central States between 2003 and 2004 increased to 564 tons, an increase of only 1 ton (table 14).
- In 2004, only 19 percent of the roundwood and 34 percent of the residues produced for pulpwood in the Central States went to pulp mills located in the Central States.
- Hardwood residues from sawmills and other wood-using mills accounted for 71 percent of all the wood material used by the Central States pulp mills. It continues to be the dominant form of wood material procured.

## PLAINS STATES

*Because of the limited number of pulp mills in the Plains States, detailed production and receipts are not reported to avoid disclosure of individual mill receipts.*

### PRODUCTION

- In 2004, the Plains States produced 116 thousand cords of roundwood and mill residues for pulpwood production, an increase of more than 80 percent from 2003 (fig. 18). Pulpwood came from Kansas, North Dakota, and South Dakota.
- Softwood residues accounted for more than two-thirds of the pulpwood production for the Plains States in 2004 (fig. 19).

- The only species harvested from the Plains States for pulpwood production in 2004 were ponderosa pine, aspen, balsam poplar, and cottonwood.
- The only mill in the Plains States in 2004 was Merillat Industries, Inc. (particleboard), in Rapid City, SD, which has an annual production capacity of 93 million square feet 3/4-inch basis.

Figure 18.—  
Pulpwood production in the Plains States, 2000-2004.

Figure 19.— Plains States pulpwood production by species group and residues, 2004.

## APPENDIX

### CONVERSION FACTORS USED IN THE NORTH-CENTRAL REGION

Standard cords of green roundwood per green ton:

Species	Factor	Species	Factor
Softwoods	0.4688	White birch	0.4018
Northern white-cedar	.6329	Yellow birch	.3723
Balsam fir	.4688	River birch	.3871
Hemlock	.4150	Sweetgum	.3669
Jack pine	.4688	Yellow-poplar	.4219
Red pine	.4688	Blackgum	.3779
White pine	.4777	Sycamore	.4083
Shortleaf pine	.3956	Cottonwood	.4291
Spruce	.5014	Elm	.4018
Tamarack	.4291	Hickory	.3701
Hardwoods	.3939	Hard maple	.3617
Soft hardwoods	.4171	Soft maple	.4083
Hard hardwoods	.3708	Black cherry	.4688
Ash	.4330	Red oak	.3444
Aspen	.4291	White oak	.3723
Balsam poplar	.4083	Black oak	.3444
Basswood	.5167	Other hardwoods	.4777
Beech	.3956

0 = Less than 1/2 cord.

<sup>1</sup>Includes only those counties that supplied pulpwood in 2004.

Table may not add due to rounding.

Table 7.--Pulpwood production from roundwood by Forest Survey Unit, county, and species group, Wisconsin, 2004

(In standard cords, unpeeled)

Piva, Ronald J.

2006. **Pulpwood production in the North-Central Region, 2004.** Resour. Bull. NC-265. St. Paul, MN: U.S. Department of Agriculture, Forest Service, North Central Research Station. 51 p.

Discusses 2004 production and receipts in the Lake, Central, and Plains States. Shows Michigan, Minnesota, and Wisconsin production by species for each county and compares production by Forest Survey Unit with that of previous years. Presents production data for Illinois, Indiana, Iowa, and Missouri by species group and product form. Includes 2004 production for the Plains States by species group and product form.

**KEY WORDS:** Roundwood, whole-tree chips, residue, pulpwood, particle-board, Michigan, Minnesota, Wisconsin, Illinois, Indiana, Iowa, Missouri, Plains States.

---

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410, or call (202) 720-5964 (voice or TDD). USDA is an equal opportunity provider and employer.

## **MISSION STATEMENT**

---

We believe the good life has its roots in clean air, sparkling water, rich soil, healthy economies, and a diverse living landscape. Maintaining the good life for generations to come begins with everyday choices about natural resources. The North Central Research Station provides the knowledge and the tools to help people make informed choices. That's how the science we do enhances the quality of people's lives.
