I.	OVERVIEW OF ALTERNATIVE CONVEYANCE SYSTEMS	
1.1	Introduction	1
1.2	Pressure Systems	3
1.3	Vacuum Systems	7
1.4	Small Diameter Gravity Sewers	22
1.5	Comparison with Conventional Collection	24
1.6	References	25
2	PRESSURE SEWER SYSTEMS	
2.1	Introduction	27
2.2	Detailed System Plan and Elevation Views	28
2.3	Detailed Description of On-Lot System Components	30
2.4	System Design Considerations	40
2.5	Construction Considerations	76
2.6	O&M Considerations	79
2.7	System Costs	84
2.8	System Management Considerations	88
2.9	References	90
3	VACUUM SEWER SYSTEMS	
3.1	Introduction	93
3.2	System Plan and Elevation Views	95
3.3	Description of System Components	95
3.4	System Design Considerations	102
3.5	Construction Considerations	131
3.6	O&M Considerations	136
3.7	Evaluation of Operating Systems	141
3.8	System Costs	147
3.9	System Management Considerations	153
3.10	References	155
4	SMALL DIAMETER GRAVITY SEWERS	
4.1	Introduction	157
4.2	Description of System Components	157
4.3	System Design Considerations	159
4.4	Construction Considerations	172
4.5	O&M Considerations	175
4.6	Review of Operating Systems	181
4.7	System Costs	181
4.8	System management Considerations	191

Contents (continued)

Chapter		Page
4.9	References	191
5	DESIGN EXAMPLES	
5.1	Pressure Sewer System	193
5.2	Vacuum Sewer System	195
5.3	Small Diameter Gravity Sewers	204

Figures

Number		Page
1-1	Installation of pressure sewer main	5
1-2	Grinder Pump (GO) system	6
1-3	Septic Tank Effluent Pump (STEP) system	6
1-4	Liljendahl-Electrolux vacuum system	8
1-5	Vacuum toilet	8
1-6	Colt-Envirovac vacuum system	10
1-7	AIRVAC vacuum system	10
1-8	Major components of a vacuum sewer	13
1-9	AIRVAC valve pit/sump arrangement	14
1-10	Upgrade/downgrade/level transport	15
1-11	Diagram of a typical vacuum station	16
1-12	Early design concept - reformer pockets	18
1-13	Current design concept - pipe bore not sealed	18
1-14	Gravity sewer system example	21
1-15	Vacuum-assisted gravity sewer system example	21
1-16	Schematic of a SDGS system	23
2-1	Piping system appurtenances	29
2-2	Typical simplex GP package using slide away coupling and guide rails	32
2-3	Typical centrifugal GP package with pump suspended from basin cover	33
2-4	Duplex GP station	34
2-5	Typical progressing cavity-type GP package	35
2-6	Basic components of a progressing cavity grinder pump	36
2-7	STEP pump in external vault	37
2-8	Typical STEP package with internal pump vault	38
2-9	Head-discharge curves for typical GP and STEP systems	39
2-10	Wastewater flows for one home	42
2-11	Required pumping rates using flows from Reference 11	42
2-12	Design flows	44
2-13	Zoning of GP or solids handling pump vault	52
2-14	Zoning of a STEP system interceptor tank showing scum and sludge accumulation	55
2-15	Zoning of a STEP system interceptor tank showing liquid levels at pump off, on, and high-level alarm	55
2-16	Two-compartment interceptor tank with hole in baffle wall where clear space expected	57
2-17	Two-compartment interceptor tank using combination tee and 1/4 bend	57
2-18	Multiple-unit interceptor tank and pump assembly	58
2-19	Head-discharge curves for one and multiple centrifugal pumps in parallel	61
2-20	Effective pump curve	62
2-21	Rotor and cutaway stator of progressing cavity-type pump	63
2-22	Typical progressing-cavity pump H-Q curve	64
2-23	Circuit diagram of a basic 120-volt control panel	66
2-24	Wastewater-type air release valve	68
2-25	Basket strainer used with external pump vault	72
2-26	Multi-tray filter, used with external pump vault	72

Figures (continued)

Number		Page
2-27	Outlet tee fitted with well screen	73
2-28	Mesh placed over inlet ports of internal pump vault	73
2-29	Fully-screened internal pump vault	74
2-30	Slotted pump vault	74
2-31	Example lot facility plan	77
3-1	Typical layout - vacuum sewer system	94
3-2	Water sewer/vacuum system similarities	95
3-3	Profile view of typical vacuum sewer line	96
3-4	Plan and profile view - typical valve pit	97
3-5	Auxiliary vent location	99
3-6	Lift detail	99
3-7	Line diagram of a typical vacuum station	100
3-8	Vacuum lift capability	104
3-9	Static loss determination	104
3-10	Top view of crossover connection	108
3-11	Typical configurations for gravity connections	110
3-12	Typical fiberglass valve pit setting	111
3-13	Shallow fiberglass valve pit setting	113
3-14	Plan and elevation views of typical concrete buffer tank	114
3-15	Typical concrete dual buffer tank	115
3-16	Model D arrangement with external breather	117
3-17	Model S arrangement - sump vented	118
3-18	Early system external breather dial	119
3-19	Early system external breather dial	120
3-20	Auxiliary vent detail	121
3-21	AIRVAC cycle counter - two methods of connection	122
3-22	Division valve with gauge tap detail	124
3-23	Terminal access point detail	124
3-24	NPSHa calculation diagram with typical values	127
3-25	Typical elevations of level control probes	130
4-1	Components of a small diameter gravity sewer (SDGS) system	158
4-2	Typical pre-cast concrete interceptor tank	158
4-3	Service lateral installation using a trenching machine	160
4-4	Typical combination cleanout and air release valve detail	160
4-5	Typical STEP lift station detail	161
4-6	Alternative locations for interceptor tanks	165
4-7	Typical interceptor tank outlet baffles	165
4-8	Typical surge chamber detail	166
4-9	Interceptor outlet flow control device	166
4-10a	Typical cleanout detail	168
4-10b	Typical cleanout detail	169
4-11	Ventilated cleanout detail	170
4-12	Australian boundary trap detail	171
4-13	Examples of drop inlets, external and internal	173
4-14	Soil odor filter detail	174
4-15	Example of general easement	176
4-16	Mainline lift station with emergency storage	179
4-17	Emergency pumping manhole	180

Figures (continued)

Number		Page
5-1	Example pressure sewer design	194
5-2	Design example layout	196
5-3	Design example profiles	197
5-4	Design example profiles	198
5-5	Design example profiles	199
5-6	SDGS design example system profile	205

Tables

Number	Page
1-1 Vacuum Collection System Parameters	11
1-2 Vacuum Station Parameters	11
1-3 Summary of Vacuum System Types	11
1-4 Operating Vacuum Systems in the United States	19
2-1 Approximate Main Sizes Required to Serve Number of Homes Shown	46
2-2 Typical Requirements for Separation of Pressure Sewer Lines from Water Lines	47
2-3 Abbreviated Listing of PVC Pipe Dimensions	49
2-4 Sludge and Scum Accumulation at Glide, Oregon	54
2-5 Typical Zoning Design For a 1,000-gal Interceptor Tank Serving a Single-Family Residence	56
2-6 Distribution of Causes for Call-Out Maintenance On Selected Grinder Pump Pressure Sewer Projects	81
2-7 Distribution of Causes for Call-Out Maintenance On Selected STEP Pressure Sewer Projects	82
2-8 Average Installed Unit Costs (mid-1991) for Pressure Sewer Mains and Appurtenances	85
2-9 Average Installed Unit Costs (mid-1991) for Grinder Pump Services and Appurtenances	85
2-10 Average Unit Costs (mid-1991) for STEP Services and Appurtenances	87
2-11 O&M Cost Accounting Records for the Glide, Oregon Pressure Sewer System	88
3-1 Recommended Lift Height	104
3-2 Main Line Design Parameters	105
3-3 Guidelines for Determining Line Slopes	105
3-4 Governing Distances for Slopes Between Lifts	105
3-5 Maximum Flow for Various Pipe Sizes	105
3-6 Maximum Number of Homes Served for Various Pipe Sizes	105
3-7 Service Line Design Parameters	108
3-8 "A" Factor for Use in Vacuum Pump Sizing	126
3-9 Discharge Pump NPSH Calculation Nomenclature	126
3-10 Values of V_o for a 15-Minute Cycle @ Q_{min} for Different Peaking Factors	127
3-11 Spare Parts List Per Every 50 Valves	132
3-12 Specialty Tools and Equipment for Collection Systems	132
3-13 Specialty Equipment for Vacuum Station	132
3-14 Normal Operating Tasks and Frequencies	138
3-15 Preventive Maintenance Tasks and Frequencies	139
3-16 Operating Systems Visited in 1989	142
3-17 General Information on Operating Systems	143
3-18 Design/Construction Data - Collection System	143
3-19 Design/Construction Data - Vacuum Stations	143
3-20 O&M Data-General Information	144
3-21 O&M Data - Person-Hours/Year	144
3-22 O&M Data - Power Consumption/Year	144
3-23 O&M Data - Mean Time Between Service Calls	144
3-24 Problem Classification	145
3-25 Average Installed Unit Costs (mid-1990) for Vacuum Sewer Mains and Appurtenances	148

Tables (*continued*)

Number		Page
3-26	Average Installed Unit Costs (mid-1990) for Vacuum Pits and Appurtenances	148
3-27	Average Installed Cost for Vacuum Station	149
3-28	Typical O&M Cost Components	150
3-29	Person-Hour Estimating Factors	150
3-30	Vacuum Station Power Consumption Estimating Factors	151
3-31	Typical Renewal and Replacement Factors for major Equipment	152
3-32	Annual Budget Example	153
4-1	Summary of SDGS Projects Reviewed	182
4-2	Summary of Interceptor Tank Characteristics Used in Selected projects	184
4-3	Summary of Collector Main Design Criteria Used in Selected projects	185
4-4	Comparison of System Component Use as a Function of Number of Connections or Feet of Collection Main Installed in Selected Projects	186
4-5	Comparison of SDGS Construction Costs from Selected Projects	187
4-7	Comparison of Unit Costs of Components from Selected Projects	188
4-7	Summary of Component Costs from Selected Projects	189
4-8	Summary of Component Costs (by percentage) from Selected projects	190
5-1	Design Example Line Loss Calculations	200
5-2	Design Example Line Loss Calculations	201
5-3	Design Example Piping Calculations	202
5-4	Design Example Vacuum Station Calculations	203
5-5	Computations for SDGS Design Example	206

Acknowledgments
