APRIL 1991

This Technical Memorandum series is used for documentation and timely communication of preliminary results, interim reports, or similar special-purpose information. Although the memoranda are not subject to complete formal review, editorial control, or detailed editing, they are expected to reflect sound professional work.
The National Marine Fisheries Service (NMFS) does not approve, recommend or endorse any proprietary product or proprietary material mentioned in this publication. No reference shall be made to NMFS, or to this publication furnished by NMFS, in any advertising or sales promotion which would indicate or imply that NMFS approves, recommends, or endorses any proprietary product or proprietary material mentioned herein or which has as its purpose any intent to cause directly or indirectly the advertised product to be used or purchased because of this NMFS publication.

This report should be cited as follows:

INTRODUCTION

In 1978, the National Marine Fisheries Service (NMFS) Galveston Laboratory initiated research involving experimental head starting (captive rearing) of Kemp's ridley sea turtle (Lepidochelys kempi). Since that time, the laboratory has continued head starting, but has expanded its research on sea turtles to include a wide variety of topics, both in the field and in the laboratory.

The purpose of this report is to list the citations of sea turtle publications and reports by the Galveston Laboratory to bring them to the attention of potential users and to provide information concerning how copies or reprints might be obtained. For example, NOAA Technical Memoranda in the bibliography can be obtained from the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161 (refer to the accession number when ordering copies).
