FINDING OF NO SIGNIFICANT IMPACT FOR COVE POINT LIQUEFACTION PROJECT REGARDING DOMINION COVE POINT LNG, LP, APPLICATION SEEKING DEPARTMENT OF ENERGY AUTHORIZATION TO EXPORT LIQUEFIED NATURAL GAS FROM DOMINION COVE POINT LNG TERMINAL TO NON-FREE TRADE AGREEMENT NATIONS

AGENCY: U.S. Department of Energy, Office of Fossil Energy

ACTION: Finding of No Significant Impact

SUMMARY: Pursuant to section 1501.6 of the regulations of the Council on Environmental Quality (CEQ), 40 CFR 1501.6, the U.S. Department of Energy (DOE) participated as a cooperating agency with the Federal Energy Regulatory Commission (FERC) in the preparation of an environmental assessment (EA) that analyzed the potential environmental impacts associated with applications submitted by Dominion Cove Point LNG, LP (Dominion) with FERC and the Department of Energy, Office of Fossil Energy (DOE/FE) seeking authorization to site, construct, and operate liquefaction and export facilities at the existing Cove Point LNG Terminal in Calvert County, Maryland.

SUPPLEMENTARY INFORMATION: On April 1, 2013, Dominion filed an application with FERC in Docket No. CP13-113-000 under section 3(a) of the Natural Gas Act (NGA) and the procedures of Part 153 of FERC’s regulations seeking authority to site, construct, modify, and operate facilities to be used for the liquefaction of natural gas for export at Dominion’s existing Cove Point LNG Terminal in Calvert County, Maryland. In addition, Dominion’s application requested authorization under section 7(c) of the NGA and Part 157 of FERC’s regulations to construct, install, own, operate, and maintain facilities at Dominion’s existing Pleasant Valley Compressor Station in Fairfax County, Virginia, and existing Loudoun Compressor Station in Loudoun County, Virginia, for the transportation of natural gas associated with Dominion’s proposed liquefaction plant. The facilities proposed under sections 3(a) and 7(c) of the NGA are collectively referred to as the Cove Point Liquefaction Project (Project). Prior to filing its application, Dominion participated in the FERC’s pre-filing process under Docket No. PF12-16-000.

On October 3, 2011, Dominion filed an Application for Long-Term Authorization to Export LNG to Non-Free Trade Agreement Countries with DOE/FE (FE Docket No. 11-128-LNG). In its application, Dominion requested approval to export LNG up to the equivalent of 1 billion cubic feet of natural gas per day (Bcf/d), or approximately 7.82 million metric tons per year (mtpy) to any country with which the United States does not have a free trade agreement (FTA) and with which trade is not prohibited by U.S. law or policy. On May 2, 2013, Dominion notified DOE/FE that Dominion had requested FERC authorization to construct and operate liquefaction facilities with LNG production capacity of up to 5.75 mtpy (estimated by DOE/FE to be 0.77 Bcf/d), instead of 7.82 mtpy (1 Bcf/d).
On September 11, 2013, DOE/FE issued Order No. 3331 conditionally authorizing Dominion to export LNG up to the equivalent of 0.77 Bcf/d of natural gas to non-FTA nations subject to the satisfactory completion of the environmental review being prepared by FERC on Dominion’s application to build and operate the Project. The purpose and need for DOE action is to comply with section 3(a) of the NGA, which requires DOE to issue an order granting an application for authority to export natural gas unless, after opportunity for hearing, it finds that the proposed export will not be consistent with the public interest.

FERC prepared an EA for the Project, which it released for comment in May 2014, and finalized in its Order Granting Section 3 Authorization, issued September 29, 2014. 148 FERC ¶ 61,244. The FERC Order, inter alia, granted Dominion’s application to construct and operate the Project subject to appropriate mitigating measures set forth as an appendix to the order.

**DOE’s Addendum:** On June 4, 2014, DOE/FE published the *Draft Addendum to Environmental Review Documents Concerning Exports of Natural Gas from the United States* for public comment (79 FR 32258). Although not required by NEPA, DOE/FE prepared the Addendum in an effort to be responsive to the public and to provide the best information available on a subject that had been raised by commenters. The Addendum addresses unconventional natural gas production in the nation as a whole. It does not attempt to identify or characterize the incremental environmental impacts that would result from LNG exports to non-FTA nations.

Fundamental uncertainties constrain our ability to foresee and analyze the incremental natural gas production that may be induced by permitting exports of LNG to non-FTA countries. Such impacts are not reasonably foreseeable and cannot be analyzed with any particularity. There is uncertainty as to the aggregate quantity of natural gas that ultimately may be exported to non-FTA countries. Receiving a non-FTA authorization from DOE/FE does not guarantee that a particular facility will be financed and built; nor does it guarantee that, if built, market conditions would continue to favor export once the facility is operational.

There is also fundamental uncertainty as to where any additional production would occur and in what quantity. As the Addendum illustrates, nearly all of the environmental issues presented by unconventional natural gas production are local in nature, affecting local water resources, local air quality, and local land use patterns, all under the auspices of state and local regulatory authority. As DOE explained in *Sabine Pass Liquefaction, LLC*, DOE/FE Order No. 2961, without knowing where, in what quantity, and under what circumstances additional natural gas production will arise, the environmental impacts resulting from production activity induced by LNG exports to non-FTA countries are not “reasonably foreseeable” within the meaning of the CEQ’s NEPA regulations.¹

The 45-day comment period on the Draft Addendum closed on July 21, 2014. DOE/FE received 40,745 comments in 18 separate submissions, and considered those comments in issuing the Addendum on August 15, 2014. DOE provided a summary of the comments received and responses to substantive comments in Appendix B of the Addendum. DOE/FE has incorporated

---

the Draft Addendum, comments, and final Addendum into the record in its Dominion Cove Point proceeding.

Adoption: All discussion and analyses related to the potential impacts of a grant of the export application are contained within the EA prepared by FERC, "Environmental Assessment for the Cove Point Liquefaction Project," which is herein adopted (DOE/EA-1942) and incorporated by reference, and in FERC’s September 29 Order Granting Section 3 Authorization. The EA examined potential impacts in the following areas and found that with appropriate mitigating measures, none would constitute a major federal action significantly affecting the quality of the human environment: geology and soils; water resources; fisheries, vegetation, and wildlife resources; land use, recreation, and visual resources; socioeconomics; cultural resources; air quality and noise; reliability and safety; and cumulative impacts. While not required by NEPA, DOE also considered the Addendum, as discussed above.

DETERMINATION: On the basis of the EA, the Addendum and FERC’s September 29 order, DOE has determined that granting Dominion’s application for authority to export LNG, subject to the environmental conditions imposed on Dominion that are set forth in the EA and FERC’s September 29 Order Granting Section 3 Authorization, will not have a significant effect on the human environment. The preparation of an environmental impact statement, therefore, is not required and DOE is issuing this Finding of No Significant Impact.

Signed in Washington, D.C., on November 5, 2014.

Christopher A. Smith
Principal Deputy Assistant Secretary
Office of Fossil Energy
U.S. Department of Energy
