TO: LEGAL COUNSEL

We are enclosing herewith an article by Dr. Oscar Auerbach and a group of pathologists entitled, "The Anatomic Approach to the Study of Smoking and Bronchogenic Carcinoma". This is to be placed in Volume V, under the heading "Cancer Theories" as pages 16 - 19. Because of the prominent mention of this article in the newspapers, we thought that you should have the article in full.

This was interpreted by several of our better science writers as indicating that tobacco smoking was an influence in the etiology of lung cancer. While the tables shown on the screen at the time of the lecture are not contained in this transcript, we believe that you will be able to understand it without them.
