

March 11, 1955

TO LEGAL COUNSEL:

✓ We are enclosing herewith an article from the JOURNAL OF THE AMERICAN MEDICAL ASSOCIATION entitled, "Philadelphia Pulmonary Neoplasm Research Project" by Drs. Boucot, Carnahan, Cooper, Nealon and Ottenberg. I have discussed this article with several cancer investigators. In their opinion, this is the most damaging research report in this field to date. This is a "forward" (as contrasted with "historical") research and regardless of the total death rate, every individual that has to date developed lung cancer has been a smoker. We have been unable to learn of any specific criticisms of this piece of research. Will you please place this in Volume I.

✓ We are also enclosing a complete translation of an article entitled, "Cancer of the Larynx" by Fernand Montreuil, which is of direct interest in the laryngeal cancer cases. This article is to be inserted in Volume V, under the heading "Laryngeal Cancer".

✓ Will you please place the article, "Cancer of the Tonsillar Region", by Dr. J. Arruda Botelho in Volume V, under the heading "Laryngeal Cancer".

✓ Will you please place 1954 #44 in its proper place in Volume IV.

A. Grant Clarke
