

Lung Cancer
Gen

January 9, 1956

TO: LEGAL COUNSEL

Enclosed herewith is an additional volume identified as "Material Classified by Subject, Volume VII" - containing the complete reports of Dr. Joseph Berkson of the Mayo Clinic, and Dr. E. Cuyler Hammond of the American Cancer Society.

Because of the importance of the two directly opposed opinions expressed by these experts in statistics, it was our opinion that you should have the complete articles rather than an abstract. These reports were delivered the evening of December 27th, 1955, at the Biltmore Hotel in New York City, at a meeting of the American Statistical Association; and represent the most up to date opinions of the two sides of the controversy insofar as the United States is concerned. The items are, of course, self-explanatory.
