Greer
Henson
Pepples
Stevens

Professor Eysenck has developed some ideas for a study of probable relationships between stress and cardiac disorder. He would like to explore these ideas in twin sets, including both smoking concordant and smoking discordant monozygotic and dizygotic twins. To do this, he would have to include in addition to the twin sets

I have discussed this with Bill Shinn, who agrees with me that this study is well worth doing and that we should recommend it to you for approval, financing to be handled through Special Account #4.

I should appreciate hearing from you at your early convenience.

Edwin J. Jacob
