ADDENDUM to
AO 98-OSS-04
Notice of Intent (NOI) Principal Investigators

In accordance with Section 6.1.4 (Notice of Intent to Propose) of the subject AO, the following list of Principal Investigators have indicated their desire to have their name and institutional address posted on the World Wide Web as an addendum to the AO. The NASA Office of Space Science is therefore willing to offer this list for access by commercial aerospace and technology organizations with the understanding that NASA takes no responsibility for the use of such information. It should be additionally noted that there were individuals who submitted NOI's but chose not to have their names so posted; NASA will continue to hold their identities in confidence.

FOREWORD

This document is a Discovery Program Announcement of Opportunity (AO) for two different types of Discovery Program investigations: Discovery Missions and Missions of Opportunity.

Section 1, Description of Opportunity, provides a brief introduction describing the scope of the solicitation, the two types of investigations that may be proposed in response to this AO, a summary of the selection process, and the schedule. Section 2, Discovery Program Goals, Objectives, and Background, and Section 3, Discovery Program Constraints, Guidelines, and Requirements, are applicable to both Discovery Mission investigations and Mission of Opportunity investigations. Section 4 describes Discovery Missions investigations and Discovery Mission-specific requirements. Section 5 describes Mission of Opportunity investigations and Mission of Opportunity-specific requirements. Section 6, Proposal Preparation and Submission, Section 7, Proposal Evaluation, Selection, and Implementation, and Section 8, Conclusion, are applicable to both Discovery Mission investigations and Mission of Opportunity investigations.

Proposers interested only in Discovery Mission investigations should read sections 1, 2, 3, 4, 6, 7, and 8 and any Appendices referred to in those sections.

Proposers interested only in Mission of Opportunity investigations should read sections 1, 2, 3, 5, 6, 7, and 8 and any Appendices referred to in those sections.
1.0 Description of Opportunity

1.1 Introduction and Announcement Objectives

The National Aeronautics and Space Administration (NASA) announces the opportunity to conduct planetary science investigations through Discovery Program space flight missions that meet the goals of planetary system(s) exploration. For the purpose of this Announcement, the terms “planetary science” and “planetary system(s) exploration” encompass:

- The scientific objectives of the NASA Solar System Exploration theme, and
- The search for extrasolar planetary systems elements of the NASA Astronomical Search for Origins theme.

Discovery missions, therefore, are solar system science missions intended for travel to and exploration of solar system bodies, and/or for remote examination of the solar system and extrasolar planetary system environments. These themes are amplified in documents cited in Section 2.1. Additional information concerning these themes can be found on the Office of Space Science homepage at the World Wide Web URL address <http://www.hq.nasa.gov/office/oss/>

The strategic role of the Discovery Program is to address Space Science Enterprise science goals and objectives that are not addressed by missions explicitly included in the Space Science Enterprise Strategic Plan (see Section 2.1 and/or Appendix E). Missions that are intended to achieve science goals of missions already in the Strategic Plan for a similar time period may not be proposed for consideration by this AO. For example, missions with science goals similar to those for the Pluto/Kuiper Express, Europa Orbiter, and Mars 2003 should not be proposed.

The Discovery Program is designed to accomplish frequent, high quality planetary system(s) science investigations utilizing innovative, streamlined, and efficient management approaches. It seeks to reduce total mission cost substantially and to improve performance through the use of new technology and through commitment to, and control of, design/development and operations costs, and to transfer new technology among space, nonaerospace firms, educational, other nonprofit organizations, and Government entities. It requires proposers to set goals for the participation of small disadvantaged businesses, women-owned small businesses, Historically Black Colleges and Universities, and other Minority Educational Institutions in proposed procurements. Finally, it seeks to enhance public awareness of, and appreciation for, space exploration and to incorporate Educational and Public Outreach (E/PO) activities into planetary system(s) science investigations.

Proposals to the Discovery Program require careful tradeoffs between science and cost to produce investigations with the highest possible science value for the cost. Investigations proposed at or near the cost cap may be selected only if the science is especially compelling. NASA is seeking program balance between lower and higher cost investigations that will allow a mission launch every 12 to 24 months within the Discovery funding profile. Accordingly, the total cost to NASA for all phases of the investigation, including mission launch services and the spacecraft, will be a determining factor in selection.
This AO invites proposals for investigations for the seventh Discovery Mission (and possibly the eighth), and for the execution of appropriate scientific investigations through participation in non-NASA space missions, identified in this announcement as Missions of Opportunity.

Discovery Mission investigations are characterized as complete missions launched on Expendable Launch Vehicles or the Space Shuttle (see Section 4.1 for a description of launch options and restrictions). Proposals submitted in response to this AO for Discovery Mission investigations must be for complete investigations from project initiation (Phase A/B) through mission operations (Phase E), which is to include analysis and publication of data in the peer reviewed scientific literature and delivery of the data to the Planetary Data System (PDS). Proposals must be consistent with the criteria specified in this AO. Proposals that describe only portions of investigations (such as the provision of an instrument as part of a nondomestic mission) may, if appropriate, be proposed as Mission of Opportunity investigations. Approximately four to six Discovery Mission investigations will be selected under this AO and will be awarded contracts to conduct concept studies with options for the follow-on phases. NASA will review the results of the concept studies and intends to select one investigation for flight. However, NASA reserves the right to select and approve additional investigations for flight, based on funding availability and overall compelling scientific merit. Investigations not selected for concept study or flight may recompete for a future flight opportunity under a subsequent Discovery Program AO. Further information on Discovery Mission investigations is given in Section 4.0.

Mission of Opportunity investigations are characterized as being part of non-NASA space missions of any size, but having a total cost to NASA that is under $22 million in Fiscal Year 1999 dollars. These investigations are generally conducted on a no-exchange-of-funds basis with the organization sponsoring the mission. NASA intends to solicit proposals for Mission of Opportunity investigations with each future AO issued for the Discovery Program. For each AO, the cost limit for Mission of Opportunity investigations is expected to be constant, adjusted only for inflation.

Mission of Opportunity investigations may be undertaken through the Discovery Program when the perceived value is high and the proposed cost to NASA is within the above funding limits. NASA, however, is not required to select a Mission of Opportunity investigation under this solicitation. Note that if a Mission of Opportunity investigation is selected, a reduced flight rate of Discovery Mission investigations is expected. The Discovery Program also expects Mission of Opportunity investigations to meet other program objectives for reducing cost, infusing and transferring new technology, and enhancing education and public outreach. Further information on Mission of Opportunity investigations is given in Section 5.0.

1.2 Proposal Evaluation and Selection Process

The selection process for this Discovery AO will be done in two phases.

- In phase one, selection of proposals submitted in response to this AO will be based principally on their scientific merit, as evaluated by peer review. In accordance with NASA’s desire to fly missions as frequently as possible, the proposed cost to NASA will also be an
important selection criterion, but it will be given lower weight than scientific merit. The technical merit and feasibility of the scientific investigation; the feasibility of the mission implementation scheme; and the demonstrated commitment to education and public outreach, to technology infusion/transfer, and to participation of small, and small disadvantaged businesses are additional selection criteria. These criteria will be given still lower and approximately equal weights. It is anticipated that four to six Mission investigation proposals will be selected and awarded contracts as a result of this first phase. One or more Mission of Opportunity investigation proposals may also be selected; however, NASA is not required to make such a selection under this solicitation.

- Phase two begins with a four-month concept study conducted by each selected investigation team. Each concept study for Discovery Mission investigation will be funded up to $375K (real year dollars) by NASA. Concept study funding for Mission of Opportunity investigations will be determined on a case by case basis; however, the funding will be limited to a maximum of $250K (real year dollars) by NASA. At the end of the concept studies, NASA will conduct a detailed review to evaluate the implementing details of the selected investigations, namely, any modifications of the scientific objectives; the proposed cost to NASA; design details of the experiment hardware; plans for mission implementation, including all technical and management factors; details of the education and public outreach programs; and plans for the infusion and transfer out of new technology (as appropriate). As a result of this second evaluation, one or more Discovery Mission investigations and possibly one or more Mission of Opportunity investigations will be selected for implementation leading to flight.

1.3 Proposal Opportunity Period and Schedule

NASA is seeking Discovery Mission investigations with a mission launch date no later than September 30, 2004; investigations with anticipated launch dates later than this should be proposed in response to a subsequent Discovery AO. However, proposed investigations with launch dates later than that date may be considered if there are sufficiently compelling reasons for them to be considered at this time.

NASA is also seeking Mission of Opportunity investigations through this AO where a commitment from NASA is needed by the sponsoring organization before December 31, 1999. The launch dates for these missions may be at any time. Missions of Opportunity requiring later commitment dates should propose in response to a subsequent Discovery Program AO.

The following schedule describes the major milestones for this Discovery Announcement of Opportunity:

- AO release.................................................................March 31, 1998
- Preproposal Conference..............................................April 14, 1998
- Notice of Intent due..................................................April 30, 1998
- Proposal due by 5 p.m. CDT.........................................June 29, 1998
- Selections announced (target).................................November 1998
- Concept Study due (target)........................................March 1999
- Downselection of investigations (target)......................May 1999
2.0 Program Goals and Objectives

2.1 Planetary System(s) Exploration Goals

The scientific goals of planetary system(s) exploration within the Office of Space Science (OSS) are generally contained in *The Space Science Enterprise Strategic Plan: Origins, Evolution, and Destiny of the Cosmos and Life*, (November 1997). The goals in this plan are supported by the documents *Mission to the Solar System: Exploration and Discovery, A Mission and Technology Roadmap, 2000-2025*, (September 1996), the report of the Solar System Exploration Subcommittee, titled *Solar System Exploration 1995-2000*, and the report of the National Research Council’s Committee on Planetary and Lunar Exploration, titled *An Integrated Strategy for the Planetary Sciences: 1995-2010*. The goals related to the search for extrasolar planetary systems in this plan are supported by *Search for Origins Roadmap* (April 1997), the Association of Universities for Research in Astronomy report *HST and Beyond, Exploration and Search for Origins: A Vision for Ultraviolet - Optical - Infrared Space Astronomy* (May 1996), and the report *Exploration of Neighboring Planetary Systems (ExNPS)* (October 1995). All of these documents are contained in the Discovery Program Library (see Appendix E). The scientific goals in these referenced documents as they relate to the scientific objectives of the NASA Solar System Exploration theme, and the search for extrasolar planetary systems element of the NASA Origins theme, (see Section 1.1) form the basis of the science evaluation criteria.

The goals and strategies outlined in the above documents encompass a wide range of scientific questions spanning a variety of scientific disciplines that NASA seeks to address by supporting investigations in three broad categories: (1) laboratory research and theoretical analyses, (2) ground-based astronomical observations, and (3) flight projects. The Discovery Program solicits only those investigations that fall into the third category. Investigations proposed to be accomplished as flight projects in the Discovery Program include, but are not limited to, remote observations from Earth-orbiting spacecraft, flyby and/or rendezvous/orbiter spacecraft, soft landers and/or penetrators, and sample return missions.

2.2 Discovery Program Objectives

**Principal Goal: Perform frequent, high-quality scientific investigations that assure the highest science value for cost.**

By conducting a series of planetary systems science investigations at the highest value for cost, NASA will provide a mechanism by which the most pressing questions in planetary systems science may be addressed, permitting a steady improvement in our understanding of planetary systems and the processes that affect them. The frequent, steady nature of the investigations will assure a continuing stream of fresh scientific data to the planetary systems science community, thus helping to maintain the excellence of the U.S. planetary systems science program.
Supporting Objective 1: Pursue innovative ways of doing business.

The short development schedule and low costs associated with Discovery demand innovative business and management practices. NASA's approach to Discovery investigations encourages teaming arrangements among industry, university, and/or Government partners. Competitively selected teams will have the responsibility and authority to accomplish the entire mission. This will permit them to utilize innovative approaches necessary to stay within the strict cost and schedule limits of the program. NASA oversight and reporting requirements will be limited to only that which is essential to assure science investigation success in compliance with committed cost, schedule, performance, reliability, and safety requirements.

Supporting Objective 2: Encourage the use of new technologies to achieve program objectives and foster their transfer into the private sector.

The inclusion of new technologies to achieve performance enhancements and to reduce total mission cost is encouraged in Discovery proposals. Proposals that include new technologies should pay especially careful attention to technology development plans and/or risk mitigation approaches. The use of new technologies will enable more aggressive and exciting scientific objectives to be pursued. The teaming of industry, university, and Government is meant to foster an environment conducive to technology development, utilization, and commercialization.

Supporting Objective 3: Enhance general public awareness of, and appreciation for, planetary system(s) exploration and support the Nation's educational initiatives.

Contributing to the improvement of science education and the public understanding of science are goals of the Discovery Program and of the Office of Space Science as a whole. The Discovery Program is committed to incorporating program elements directed toward informing the public and providing educational opportunities that support local, state, regional, and national educational objectives and reform efforts.

3.0 Discovery Program Constraints, Guidelines, and Requirements

This section describes the constraints, guidelines, and requirements applicable to all Discovery Program selections. Additional options, guidelines, and requirements specific to Discovery Missions investigations are in Section 4. Additional constraints, guidelines, and requirements specific to Mission of Opportunity investigations are in Section 5. Specific directions for proposal preparation are included in Section 6 and in Appendix B. For investigations selected in phase one, specific guidance relative to the concept study preparation is contained in a document in the Discovery Program Library (DPL) entitled Guidelines for Concept Study Report Preparation (see Appendix E).

3.1 General Program Constraints and Guidelines

In the Discovery Program, the major responsibility for the selected investigation rests with the investigation team, which will have a large degree of freedom to accomplish its proposed objectives within the stated constraints with only essential NASA oversight. Once an
investigation has been selected for flight, failure to maintain reasonable progress on an agreed
upon schedule or failure to operate within the constraints outlined in this section may be cause
for its termination by NASA.

Every aspect of a Discovery investigation must reflect a commitment to mission success while
keeping total costs as low as possible. Consequently, investigations should be designed and
scoped to emphasize mission success within cost and schedule constraints by incorporating
sufficient cost, schedule, and design margins, reserves, and content resiliency.

Only those investigations whose proposed cost, design/development schedule, and launch vehicle
requirements are within the constraints and guidelines identified herein will be considered as
candidates for selection. Investigations significantly below the cost and launch vehicle
constraints are encouraged to enable more frequent and, therefore, diverse Discovery Program
missions.

Discovery investigation teams must be led by a single Principal Investigator (PI) who may be
from any category of domestic and nondomestic organizations, including educational institutions,
industry, nonprofit institutions, NASA Centers, the Jet Propulsion Laboratory (JPL), and other
Government agencies.

Teaming arrangements among universities, industry, nonprofit institutions, and/or Government
agencies (both foreign and domestic) are encouraged. Teams are encouraged to utilize industry
participation to the fullest extent reasonable. NASA field centers and the Jet Propulsion
Laboratory are welcome as Discovery mission team members. However, when a NASA field
center or JPL participates as a member of a Discovery mission team, it should do so because it
brings unique skills, facilities, and/or capabilities to the team.

3.2 Science Requirements

The Discovery Program is intended to perform focused planetary system(s) science
investigations. The relationship between the scientific objectives, the data to be returned, and the
instrument payload to be used in obtaining the desired data must be unambiguous and clearly
stated. Discovery investigation teams will be responsible for initial analysis of the data, its
subsequent delivery to the Planetary Data System (PDS), and the publication of scientific
findings and communication of results to the public. (Information on the PDS, its formats, and
its requirements is included in the Discovery Program Library (DPL) discussed in Section 6.1.1.).
Options for extended missions are not to be included in proposals to this AO.

The strategic role of the Discovery Program is to address science goals and objectives that are not
addressed by missions explicitly included in the Space Science Enterprise Strategic Plan (see
Section 2.1 and/or Appendix E). Investigations that are intended to achieve science goals of
missions already in the Strategic Plan for a similar time period are not within the scope of this
AO. For example, missions with science goals similar to those for the Pluto/Kuiper Express,
Europa Orbiter, and Mars 2003 should not be proposed. All other science objectives and targets
within planetary system(s) exploration are within the scope of this AO (see documents
referenced in Section 2.1, which are included in the DPL).
Any samples of extraterrestrial planetary materials returned by Discovery missions shall be delivered to the NASA astromaterial curatorial facility located at NASA’s Johnson Space Center (JSC); contact Dr. Douglas Blanchard, Acting Astromaterial Curator at (281) 483-5151. Costs for use of this facility should be included in the total cost to NASA. Investigation teams will be responsible for all aspects of the delivery of such materials to the astromaterial curatorial facility. This facility will be given the task of providing for the physical security, inventory accountability, environmental preservation, and distribution of the samples in support of scientific research programs organized around each mission. For every Discovery mission investigation in which extraterrestrial planetary materials are returned to Earth, the JSC astromaterial curatorial facility will perform sample processing in support of the mission science team. The science team shall be allocated no more than 25 percent (by mass) of the returned sample unless a larger fraction can be fully justified by the nature of the proposed investigation. The remainder shall be kept in pristine condition for research by the community at large.

NASA reserves the right to add Guest Investigators (GI’s), in cooperation with the PI, toward the end of the design/development phase or during operations. In the event NASA chooses to add such GI’s, then NASA will assume full management and financial responsibility for these additional investigations. The PI may elect to propose a GI program as part of the investigation’s data analysis program, covered by the Phase E funding. In such a case, NASA will advertise the opportunity and select participants in cooperation with the PI.

There shall be no proprietary data rights period for Discovery investigations. Discovery teams will be responsible for collecting the scientific, engineering, and ancillary information necessary to validate and calibrate the scientific data prior to delivery to the PDS. Data products delivered to the PDS shall be calibrated in physical units useable by the scientific community at large. The time required to complete this process should be the minimum necessary to provide appropriate data to the scientific community and the general public. Investigation teams must include an appropriate data analysis period independent of the PDS archiving activities as a part of their funded Phase E activities.

### 3.3 Education, Public Outreach, Technology, and Small Disadvantaged Business Requirements

The education, outreach, technology, and small disadvantaged business requirements encompass the areas described in the three following subsections.

#### 3.3.1 Education and Public Outreach

The NASA Office of Space Science (OSS) has developed a comprehensive approach for making education at all levels (with a particular emphasis on pre-college education) and the enhancement of public understanding of space science integral parts of all of its missions and research programs. The two key documents that establish the basic policies and guide all OSS Education and Outreach activities are a strategic plan entitled *Partners in Education: A Strategy for Integrating Education and Public Outreach Into NASA’s Space Science Programs* (March 1995), and an accompanying implementation plan entitled *Implementing the Office of Space Science (OSS) Education/Public Outreach Strategy* (October 1996). Both are available through the
In accordance with these established OSS policies, all respondents to this AO must include an Education/Public Outreach (E/PO) component as a part of their overall proposal. In accordance with the policies outlined in the education implementation plan referred to above, a guideline of up to 2% of the total mission budget over the period of performance of the proposal is anticipated to be allocated to education and outreach. OSS expects that a substantive education/outreach program will be an integral element of every selected mission and that adequate resources will be devoted by proposers to the planning and implementation of such an effort. Proposed activities may also include public information programs that will inform the public through mass media or other means, or utilize other innovative ideas for bringing space science to the public. Proposals must include the PI’s approach for planning an education/outreach program, arranging for appropriate partners and alliances, implementing the education/outreach program (including appropriate evaluation activities), and planning for the dissemination of education/outreach products and materials. Costs for such activities must be included as a part of mission planning, development, and operations costs.

See Appendix C for a detailed discussion of evaluation criteria for E/PO proposals. Appendix C also provides information on the assistance available to develop E/PO proposals.

3.3.2 Technology

NASA seeks to infuse new technologies into its programs and to strengthen the mechanisms by which it transfers such technologies to the private sector, including the nonaerospace sector. The means by which NASA’s Office of Space Science plans to implement new technology is described in the Office of Space Science Integrated Technology Strategy (April 1994), which is included in the DPL described in Section 6.1.1. The Discovery Program represents an opportunity for NASA to develop and test new technologies and applications, as well as strengthen existing technology transfer mechanisms and explore and implement new mechanisms and approaches to economic benefit. However, investigations dependent on new technology must have adequate backup plans defined for use in the event that the new technology runs into problems and will not be ready prior to assembly and test of the spacecraft. Proposals will be penalized for risk if adequate backup plans to ensure mission success are not described.

3.3.3 Small Disadvantaged Business and Minority Institutions

The PI and team members shall agree to use their best efforts to assist NASA in achieving its goal for the participation of small disadvantaged businesses, women-owned small businesses, Historically Black Colleges and Universities, and other Minority Educational Institutions in NASA procurements. Investment in these organizations reflects NASA’s commitment to increase the participation of minority concerns in the aerospace community, and it is to be viewed as an investment in nation’s future. Offerors, other than small business concerns, are also advised that contracts resulting from this AO will be required to contain a subcontracting plan...
that includes goals for subcontracting with small, small disadvantaged, and women-owned small business concerns. (See Appendix A, Section XIII.)

3.4 Technical Approach Requirements

Discovery projects must encompass all technical aspects of the investigation from preliminary analysis and technical definition (Phase A/B) through delivery of the data to the PDS and their analysis (the final part of the operations phase, Phase E). NASA Handbook NHB 7120.5 Management of Major System Programs and Projects delineates activities, milestones, and products typically associated with each of these phases and may be used as a reference in defining a team’s mission approach. NASA Handbook 7120.5 is included in the DPL (see Section 6.1.1). Mission teams have the freedom to use their own processes, procedures, and methods, and the use of innovative processes is encouraged when cost, schedule, and technical improvements can be demonstrated.

Each investigation shall have a cost-effective mission assurance program. This program should include a quality assurance program that is consistent with the ISO 9000 series, American National Standard, Quality Systems - Model for Quality Assurance in Design, Development, Production, Installation, and Servicing, ANSI/ASQC Q9001-1994 (see Appendix E).

Radioisotope Thermoelectric Generators (RTG’s) are not permitted on Discovery missions proposed to this AO. Other, smaller radioactive sources (such as radioactive heating units or instrument calibration sources) are permitted. However, since such usage will require, as a minimum, an environmental assessment (See Environmental Quality Regulations, 40 CFR Parts 1500-1508 in Appendix E, DPL), proposers should minimize the quantity of radioactive material employed. As a general rule, as the quantity of radioactive material increases, the likelihood increases that an environmental impact statement, with the attendant schedule and cost risks, will be required.

Investigation teams are welcome to use currently available NASA navigation, tracking, control, communications, and other services. Non-NASA capabilities may also be used if they are technically appropriate and cost effective. The costs for such services, whether obtained from NASA or from other sources, must be included in the cost estimate. Cost information for NASA provided services (NASA’s Mission Operations and Communications Services) is provided in the DPL (See Appendix E).

3.5 Management Requirements

NASA intends to give the Principal Investigator and his/her team the ability to use their own management processes, procedures, and methods to the fullest extent possible. Discovery investigation teams should define the management approach best suited for their particular teaming arrangement. This approach should be commensurate with the investigation’s implementation approach, while retaining a simple and effective management structure that assures adequate control of development within the cost and schedule constraints. The investigation team should develop a Work Breakdown Structure (WBS) that best fits its organizational approach and mission design concept.
The PI is expected to be the central person in charge of each Discovery investigation, with full responsibility for its scientific integrity. The PI is responsible for assembling a team to propose and implement a Discovery investigation. The PI is accountable to NASA for the scientific success of the investigation and must be prepared to recommend project termination when, in the judgment of the PI, the successful achievement of established minimum science objectives, as defined in the proposal as the Performance Floor, is not likely within the committed cost and schedule reserves.

In accordance with NASA’s transfer of program management responsibility to its Centers, Discovery mission program management responsibilities have been assigned to the NASA Management Office (NMO) at the Jet Propulsion Laboratory. The responsibilities of the Discovery Program Manager in the NMO will include mission implementation oversight; coordination of Government-furnished services, equipment, and facilities; and contract management of selected investigations. In addition, the Discovery Program Manager will conduct independent reviews coincident with the major project reviews, such as preliminary design review or the critical design review.

Each Discovery investigation must have a Project Manager (PM) who will oversee the technical implementation of the project. The role, qualifications, and experience of the PM should be adequate to ensure that the technical and managerial needs of the investigation will be met.

Every Discovery investigation must also define the risk management approach it intends to use to ensure successful achievement of the investigation objectives within established resource and schedule constraints. Included in this discussion of risk management should be risk mitigation plans for new technologies and the need for any long-lead items that need to be placed on a contract before the start of Phase C/D, to ensure timely delivery. In addition, any manufacturing, test, or other facilities needed to ensure successful completion of the proposed investigation should be identified in every Discovery proposal.

3.6 Cost Requirements

3.6.1 NASA Cost

A major goal of designing a Discovery investigation is to reach a balance between science return and total cost to NASA in order to provide the highest science value for cost. The NASA Cost is the funding that NASA would be expected to provide to the investigation team over the course of the investigation, beginning with the selection and ending with the conclusion of Phase E. The specific total funding limits and limits for major mission elements are specified in Sections 4.5 and 5.4. Proposers must, however, estimate both the total mission cost (TMC) and the NASA portion of the TMC in both the proposal and the concept study. The NASA Cost (equivalent to TMC minus the cost of all contributions) will be one factor in the selection of missions and in the continuing assessment of ongoing missions. The specific cost information required for the proposals to be submitted in response to this AO and for the concept study for selected proposals is contained in Appendix B and the Discovery Program Library, respectively.
Since cost details are not anticipated until the conclusion of the concept study, cost estimates in
the proposal may be generated with models or cost estimating relationships from analogous
missions. However, the proposed cost to NASA shall not increase by more than 20% from the
proposal to the concept study and must not exceed the Discovery Program cost constraints.
Since costs and obligation authority may well be different, it is incumbent on the proposer to
define any obligation requirement that exceeds planned costs.

Once established at the end of the concept study, the estimated cost baseline must assure
adequate funding to meet cost-to-complete requirements, including the identification of credible,
phased reserves proportional to the development risk. The Discovery Program does not
maintain a reserve pool from which investigations exceeding their cost commitments may draw.
The TMC is defined as all costs that are necessary to complete the investigation incurred after
the downselection from the concept studies, which includes all costs in Phases A/B through E,
including reserves, contributions, and contract fees. In general, proposers should assume all costs
must be included unless specifically excluded. Examples of costs to be included are: launch
vehicles and any upper stages; launch services; education and outreach activities; new technology
infusion and transfer; subcontracting costs (including fees); science teams; all personnel required
to conduct the investigation, analyze and publish results, and deliver data in archival format to
the PDS; insurance; NASA Deep Space Network (DSN) support, if required (see NASA’s
Mission Operations and Communications Services document in the DPL, Appendix E);
Navigation and Ancillary Information Facility (NAIF) services; NASA curatorial support (if
required; see Section 3.2); and all labor (including contractor and Civil Servant).

3.6.2 Full Cost Accounting

NASA Civil Service labor and supporting NASA Center infrastructure must be costed on a full
cost accounting basis. If NASA guidance for full cost accounting has not been fully developed by
the closing date for proposal submission or for completion of the concept studies, NASA
Centers may submit full cost proposals based on the instructions in the NASA Financial
Management Manual, Section 9091-5, Cost Principles for Reimbursable Agreements (see
Appendix E/DPL). If any NASA costs are to be considered as contributed costs, the contributed
item(s) must be separately funded by an effort complementary to the proposed investigation,
and the funding sources must be identified. Other Federal Government elements of proposals
must follow their agency cost accounting standards for full cost. If no standards are in effect, the
proposers must then follow the Managerial Cost Accounting Standards for the Federal
Government as recommended by the Federal Accounting Standards Advisory Board.

3.6.3 Contributions

The cost of contributed hardware should be estimated as either: (1) the cost associated with the
development and production of the item if this is the first time the item has been developed and if
the mission represents the primary application for which the item was developed; or (2) the cost
associated with the reproduction and modification of the item (i.e., any recurring and mission-
unique costs) if this is not a first-time development. If an item is being developed primarily for
an application other than the one in which it will be used in the proposed investigation, then it
may be considered as falling into the second category (with the estimated cost calculated as that
associated with the reproduction and modification alone). The cost of contributed labor and services should be consistent with rates paid for similar work in the offeror's organization. The cost of contributions does not need to include funding spent before the start of the investigation (before completing a contract with NASA). The value of materials and supplies shall be reasonable and shall not exceed the fair market value of the property at the time of the contribution. Contribution funding limitations are defined in section 4.4.

3.7 International Participation

Recognizing the potential scientific, technical, and financial benefits offered to all partners by international participation, participation by non-U.S. individuals and organizations as team members in Discovery Program investigations is encouraged. Participation may include, but is not limited to, the contribution of scientific instruments, the spacecraft (or a portion thereof) and the subsequent sharing of the data from the mission, all on a no-exchange-of-funds basis. Launch vehicles and launch services may also be contributed by international partners but, unlike other contributions, are not subject to the "one-third" limit described in Section 4.4. However, they should be included in all calculations and discussions of the total mission costs.

The direct purchase of goods and/or services from nondomestic sources is permitted with the following restriction: NASA will not purchase non-U.S. launch vehicles for Discovery missions, nor may funds provided to a Discovery mission team be used to purchase a launch vehicle from a non-U.S. source. The provision of launch services as a contribution to a Discovery mission by a nondomestic partner is acceptable only on a no-exchange-of-funds basis (i.e., at no cost to NASA). Only those nondomestic launch vehicles with demonstrated reliabilities of 90% or greater may be proposed.

Potential Discovery participants are advised that a contract or subcontract using funds derived from NASA by a U.S. team with a non-U.S. participant must meet NASA and Federal regulations. These regulations place an additional burden on investigation teams that should be explicitly included in discussions of the investigation's cost, schedule, and risk management. Information regarding regulations governing the procurement of foreign goods or services is provided in Appendix D.

Participation by nondomestic individuals and/or institutions as team members or contributors to Discovery investigations must be endorsed by the institutions and governments involved. The Letter of Endorsement will provide evidence that the institution and government officials are aware and supportive of the proposed investigation and will pursue funding for the investigation if selected by NASA. The endorsement must be submitted per the schedule in Section 1.3.

4.0 Discovery Mission Investigations Options, Guidelines, and Requirements

Discovery mission proposals must be for complete, free-flying missions. The Principal Investigator (PI) is responsible to NASA not only for the scientific integrity of the investigation, but also for the management of the complete mission, including provision of the spacecraft, instrument, and ground system. Such missions may be launched on expendable launch vehicles or the Space Shuttle as free flying spacecraft.
4.1 Discovery Mission Options

Expendable Launch Vehicle Option

Proposals are for complete missions that are launched using expendable launch vehicles (ELV’s) either as primary, secondary, or co-manifested payloads. ELV’s may either be provided by NASA or by the proposer with NASA funding or as a contribution. Launch services will be provided by NASA only for a medium class (Delta II 7925H) or smaller expendable launch vehicle (see Discovery Launch Services Information Summary document in the Discovery Program Library, Appendix E). Larger launch vehicles can be proposed if they are contributed at no cost to NASA as part of a teaming proposal. The launch service costs of the Delta II 7925H or smaller expendable launch vehicle will be funded by NASA and will not be considered within the $190 million design/development cap, but will be factored into the total mission cost. Further discussions of the ELV launch option are in Section 4.5 with detailed information contained in the Discovery Launch Services Information Summary document listed in Appendix E and contained in the Discovery Program Library.

NASA seeks to take advantage of all reasonable sources of commercial ELV services while assuring that NASA-funded payloads are not exposed to excessive risk. The demonstrated reliability of the proposed launch vehicle and the resultant probability of mission success will be evaluated by NASA and factored into the feasibility of mission implementation evaluation criteria (see Section 7.2). If the opportunity is as a secondary payload on an ELV, the proposer must identify the secondary opportunity and provide evidence that the launch service provider agrees to manifest the investigation as part of the proposal. If the investigation is selected, NASA expects to contract with the U.S. launch service provider to acquire the launch service for the investigation.

It is the responsibility of the proposer to find an organization that will contribute a launch if a contributed launch is part of the proposal. The demonstrated reliability and the resultant probability of mission success will be evaluated as described above for both contributed launch services and NASA funded launch services. The use of non-U.S. provided launch services may be proposed only on a no-exchange-of-funds basis.

Space Shuttle Free Flyer Option

Use of the Space Shuttle may be proposed only if use of its unique capabilities will result in enhanced science return or are necessary for mission success. The request for a Shuttle launch must demonstrate compliance with Space Shuttle Use Policy set forth in Public Law 101-611 (see appropriate excerpts in Discovery Space Shuttle Launch Opportunities document in the Discovery Program Library/Appendix E). The Principal Investigator is responsible for working with the point(s) of contact identified in the Discovery Space Shuttle Launch Opportunities document to determine if the investigation is considered a primary or secondary payload and to identify an appropriate flight assignment.
4.2 Baseline Mission and Performance Floor

Every Discovery mission investigation must have both a "Baseline" mission and a "Performance Floor." The Baseline mission refers to that mission that, if fully implemented, will accomplish the entire set of scientific objectives proposed for the investigation. Any alteration that results in a reduction of the mission's ability to accomplish the Baseline set of scientific objectives as identified in the proposal will be considered a descoping of the investigation. The resulting set of achievable scientific objectives must be reviewed to ensure that the investigation remains at or above the Performance Floor. The Performance Floor is the minimum science component below which the investigation will not be considered justified for the proposed cost. The Performance Floor must be identified and documented for each proposed Discovery investigation along with plans for the prioritized descoping of mission capability from the Baseline to the Performance Floor in the event of cost or schedule growth. The differences between the Baseline Mission and the Performance Floor will be assessed to determine the mission's resiliency in the event that development problems lead to reductions in scope. In addition, the mission team will negotiate a set of performance metrics during the definition phase for program evaluation, including cost, schedule, and others as appropriate. Failure to maintain a level of science return at or above the Performance Floor as determined by NASA will be cause for termination of the investigation.

4.3 International Participation

Any proposed international participation must be described at the same level of detail as that of U.S. partners. This includes the provision of full cost, schedule, and management data in the proposal and in subsequent reviews. Failure to document cost and schedule data, management approaches and techniques, or failure to document the commitment of all team partners to those costs and schedules, may cause a proposal to be found unacceptable.

4.4 Contributions

Contributions of any kind, whether cash or noncash (property and services) to Discovery mission investigations by organizations other than the Office of Space Science are welcome, but the sum of additional contributions to a given mission should not exceed approximately one-third (1/3) of the proposed cost to the Office of Space Science for the Phase C/D development of that mission or $64 million (FY 1999 dollars), whichever is less. Values for all contributions of property and services shall be established in accordance with applicable cost principles. Such contributions may be applied to any part or parts of a mission, and will not be charged against the NASA design/development cost-cap of $190 million (FY 1999), but must be included in the calculation and discussion of the total mission costs. A Letter of Endorsement that contains a statement of financial commitment from each responsible organization contributing to the investigation must be submitted with the proposals for all domestic components. For nondomestic components of proposals, see Section 3.7. This Letter of Endorsement is required to assure NASA that all contributions can and will be provided as proposed.
4.5 Cost and Schedule Requirements

The Discovery Program is part of an effort to develop a program of frequent, successful, small planetary system(s) investigations. The schedule for investigations selected through this AO is expected to be such that launch can take place by September 30, 2004. The proposer must specify the launch date and indicate launch date flexibility (if any) in the proposal.

The Discovery Missions program is also part of an effort to develop space science investigations of modest scope. To this end, NASA will limit its funding of Discovery mission development costs (costs incurred from the start of Phase C/D to launch plus 30 days) and the total mission cost (TMC) to NASA to $190 million and $299 million respectively in FY 1999 dollars. Phase A/B, Phase E and all launch services costs (ELV or Shuttle) must be included in the total mission cost to NASA. The funding profile for the NASA portion of the TMC for proposed investigations must fit within the funding availability for the Discovery Program defined in Appendix G.

The Discovery Program is also intended to provide a mechanism to accomplish important scientific investigations within a short time, so the schedule for all Discovery missions must be such that the launch takes place within 35 months from the start of the design/development phase (Phase C/D). Note that Phases A and B have been combined into a single phase ending approximately one month after preliminary design review. The design/development phase is defined as ending 30 days after launch, so the maximum permissible length of any Discovery mission Phase C/D is 36 months. No constraint is placed on the length of Phase A/B or Phase E. Procurement of long-lead materials is permitted during the Phase A/B timeframe, but should be shown as a Phase C/D task and, therefore, as a Phase C/D cost. The Phase C/D long-lead procurement overlap with Phase A/B will not be considered when determining the length of Phase C/D.

4.5.1 NASA Cost

For Discovery Missions, NASA cost is limited to $299 million in fiscal year 1999 dollars, including funding for all phases and all elements (launch services, Phase A through Phase E, mission operations and data analysis). The proposer may distribute the funds among these elements as best suits the investigation.

Although NASA plans to fund directly the costs for U.S. launch services, these costs are nonetheless to be included in the proposal. Launch services may also be proposed at no cost to NASA as part of a teaming proposal.

For NASA provided ELV’s, the ELV launch services cost to be used to calculate the NASA Cost for an investigation using an ELV is provided in the Discovery Launch Services Information Summary document available in the Discovery Program Library.

If launch services using the Space Shuttle are proposed, the launch services costs should include mission unique and upper stage(s) cost, if any, and integration costs. The cost of completing development of a carrier, if such a carrier will be used for the first time, should be included under
spacecraft cost. Conditions and cost for use of this option are discussed in the *Discovery Space Shuttle Launch Opportunities* document available in the DPL (see Appendix E).

The specific cost information required for Discovery mission proposals is contained in Appendix B, Table B-1.

### 4.5.2. Total Mission Cost

The Total Mission Cost is defined as all costs that are necessary to complete an investigation beginning with selection through Phase E, including NASA costs, non-NASA civil servant costs, and contributions from U.S. and non-U.S. entities. In general, proposers should assume all costs must be included unless specifically excluded.

Contributions, that is, goods and/or services offered on a no-exchange-of-funds basis, may be to any mission element, but the total contribution is not to exceed one-third of the proposed Phase C/D NASA cost.

Proposers must estimate the Total Mission Cost in the proposal as described in Appendix B, Table B1. The Total Mission Cost, including contributions, may exceed the NASA Cost.

### 4.6 Selection and Cost Limits

It is anticipated that four to six Discovery Mission investigations will be selected for a four month Phase A concept study through this AO, with each awarded a contract with options for subsequent mission phases. At the conclusion of the concept study, it is planned that one or more investigations will be selected to proceed into subsequent mission phases. NASA will not exercise contract options nor continue funding for those investigations not selected to proceed.

A concept study will be conducted by each selected investigation team. The cost (up to $375K in real year dollars) of the concept study should be part of the initial proposal. See the *Guidelines for Concept Study Preparation* available in the Discovery Program Library for information on the concept study to be conducted by the investigation team.

During the concept study, the NASA cost shall not increase by more that 20% from that offered in the original proposal and, in any event, must not exceed the NASA cost cap of $299 million (Fiscal Year 1999 dollars). Each mission’s concept study must conclude with a commitment by the PI for the cost, schedule, and scientific performance of the investigation. If, at any time, the cost, schedule, or scientific performance commitments appear to be in jeopardy, the investigation will be subject to cancellation. The Discovery Program does not maintain a reserve pool from which investigations exceeding their cost commitments may draw.
5.0 Mission of Opportunity Investigations Background, Constraints, Guidelines, and Requirements

5.1 Missions of Opportunity Background and Constraints

By funding U.S. participation in Missions of Opportunity, NASA seeks to allow the U.S. scientific community to take advantage of missions planned and primarily funded as part of non-NASA space programs. Typically such missions are sponsored by non-U.S. governments, although missions from other U.S. agencies or private sector organizations are equally qualified.

For Missions of Opportunity, the proposer offers to participate in a non-NASA mission that is planned or that has been approved by its sponsoring organization. Such participation could take many forms, such as providing a complete science instrument, hardware components of a science instrument, or expertise in critical areas of the mission. While the U.S. investigator is not required to document the entire mission of the sponsor, the investigator must fully document their complete investigation in the proposal. NASA will evaluate the proposed investigation, not the sponsor’s entire mission.

Note that selection by NASA through this AO does not constitute selection of the investigation as part of the mission, which necessarily is a decision made by the sponsor of the mission. Instead, selection is a commitment by NASA to fund the U.S. portion of the investigation as part of the Discovery Program, although funding beyond basic studies does not begin until detailed design of the mission itself is underway. If an investigation is selected both by NASA and by the mission sponsor, the PI is responsible to NASA for the scientific integrity and the management of the PI’s contribution to the mission.

A selected investigation may result in a contract, a grant, or a cooperative agreement, depending on the nature of the proposal and the institutions involved. For this AO, a deviation is granted by the NASA Office of Procurement that allows a commercial firm that proposes a Mission of Opportunity investigation to be awarded a grant (with no requirement for NASA involvement in and contribution to the technical aspects of the investigation) provided that the commercial firm contributes at least 50% of the total resources required to accomplish the effort. Further information on grants and cooperative agreements is contained in NASA Handbook NPG 5800.1D, entitled, *Grant and Cooperative Agreement Handbook*, dated July 1996, available from the Discovery Program Library (see Appendix E).

A selected Mission of Opportunity investigation will be expected to submit a concept study report to NASA for detailed review. This report will conclude with a commitment by the PI for the cost, schedule, and scientific performance of the investigation. If, at any time, this commitment appears to be in jeopardy, the investigation will be subject to cancellation regardless of the impact of this cancellation on its “parent” mission. Like other missions proposed to this AO, the NASA funding is subject to cancellation if there is a cost overrun charged to NASA for any reason, including a launch delay caused by the non-NASA partner.

A technical and programmatic review will be held prior to the start of phase C/D. Assuming a positive outcome, NASA will confirm the investigation to proceed to development. As a condition for confirmation, the organization sponsoring the full mission must make a commitment
to enter into an appropriate agreement with NASA that shall include provisions for sharing of flight data.

5.2 General Guidelines for Missions of Opportunity

Missions of Opportunity are generally conducted on a no-exchange-of-funds basis between NASA and the mission sponsor.

5.3 Science Requirements

Mission of Opportunity investigation teams will have data analysis responsibilities defined by the policies of the mission sponsor; nevertheless, NASA expects that the mission sponsor will enter into an agreement with NASA to assure that data returned from at least those aspects of the mission in which NASA support is involved, if not the entire mission, will be made available to the U.S. scientific community in a timely way.

5.4 Cost and Schedule Requirements for Missions of Opportunity

It is incumbent on the proposing investigator to provide evidence in his/her proposal that the sponsoring organization intends to fund the mission and that the endorsement of NASA for U.S. participation is required by the sponsoring organization prior to December 31, 1999. The launch date is not constrained. If a commitment from NASA is not needed by the sponsoring organization before December 31, 1999, then the proposal should be submitted to a subsequent Discovery Program AO.

Although the level of funding available for each proposal will be decided on a case-by-case basis, proposers should be aware that any Mission of Opportunity investigation costing the Discovery Program more than $22 million in fiscal year 1999 dollars will be difficult to support (this includes all phases of the investigation). NASA's funding for a selected investigation's concept study will be limited to $250K (in real year dollars). Follow-on work prior to selection by the mission's sponsoring organization will be limited to $100K (in real year dollars), and the limit for all studies prior to the initiation of mission detailed design (Phase C) is 25% of the total NASA commitment for funding of the investigation. The PI assumes all risk for delays in the mission and should propose appropriate reserves.

Proposers must estimate the total NASA Cost in the proposal. The specific cost information required for proposals is contained in Appendix B.

During the concept study, the NASA cost shall not increase by more than 20% from that offered in the original proposal and must not exceed the NASA cost caps. Thereafter, cost shall not increase from that offered in the proposal resulting from the concept study.

Each mission’s concept study must conclude with a commitment by the proposer for the cost, schedule, and scientific performance of the investigation. If, at any time, the cost, schedule, or scientific performance commitments appears to be in jeopardy, the investigation will be subject
to cancellation. The Discovery Program does not maintain a reserve pool from which investigations exceeding their cost commitments may draw.

6.0 Proposal Preparation and Submission

6.1 Preproposal Activities

6.1.1 Discovery Program Library

The Discovery Program Library (DPL) is intended to provide additional background, technical, and management information. Information is included on the Discovery Program, science goals, launch vehicles, Deep Space Network capabilities, NASA's technology transfer infrastructure, the Office of Space Science’s Integrated Technology Strategy, the Office of Space Science’s Education and Public Outreach Strategy, the PDS, and existing NASA test and mission operations facilities. The contents of the DPL are listed in Appendix E. This library is accessible on the World Wide Web at the following address:

<http://discovery.larc.nasa.gov/discovery/dpl.html>

If necessary, hard copies of selected documents may be obtained by written request to Mr. George Albright or Dr. Jay Bergstralh at the addresses below.

6.1.2 Technical and Scientific Inquiries

Inquiries of a technical nature should be directed to Mr. George Albright, and inquiries of a scientific nature should be directed to Dr. Jay Bergstralh at their respective addresses below:

Mr. George Albright
Mission and Payload Development Division
Office of Space Science
Code SD
Ref: Discovery 98
National Aeronautics and Space Administration
Washington, DC  20546-0001

Fax Number: (202) 358-3987
E-mail: ossao@hq.nasa.gov
(note: subject field should read “DISCAO”)
Phone: (202) 358-0356

Dr. Jay Bergstralh
Research Program Management Division
Office of Space Science
Code SR
Ref. Discovery 98
National Aeronautics and Space Administration
Washington, DC  20546-0001

Fax Number: (202) 358-3097
E-mail: jay.bergstralh@hq.nasa.gov
6.1.3 Preproposal Conference

A preproposal conference will be held on April 14, 1998, at:

Lunar and Planetary Institute  
3600 Bay Area Boulevard  
Houston, TX 77058

All interested parties may attend, but only at their own expense and they must make their own travel arrangements. The purpose of this conference will be to address questions about the proposal process for this AO. The preproposal conference will address all those questions received by NASA up to five days in advance of the conference. Questions should be addressed to Mr. George Albright at the address given in Section 6.1.2. Additional questions submitted after this date, including those provided in writing at the conference, may be addressed at the conference only as time permits. Anonymity of the authors of questions will be honored. A Discovery AO Preproposal Conference Transcript, including answers to all questions addressed at the conference and minutes of the conference, will be prepared and mailed approximately two (2) weeks after the conference to attendees, to those submitting letters of intent (see Section 6.1.4), and to anyone who submits a request for this document to Mr. George Albright via fax or electronic mail.

6.1.4 Notice of Intent to Propose

To enable NASA to conduct the evaluation of proposals expeditiously, a Notice of Intent must be submitted by all prospective proposers by April 30, 1998. This Notice must be submitted electronically using the form found on the World Wide Web at:

<http://cass.jsc.nasa.gov/panel/>

Proposers without access to the Web or who have technical difficulty accessing the Web site should contact the Lunar and Planetary Institute by E-mail at <discpanel@lpi.jsc.nasa.gov> or by phone at (281) 486-2156 or (281) 486-2166 for assistance.

Material in a Notice of Intent is for NASA planning purposes only and is confidential. Although the Notice is not binding on the submitter, it must be submitted to be eligible to propose. Proposals submitted without completing the Notice of Intent requirements above will be deemed noncompliant with the conditions of this AO and will not be evaluated. In addition, Co-Investigator lists in the Notice of Intent must be considered final and may not be expanded in the proposal. In addition, see the following special notice.

SPECIAL NOTICE: As a result of recent AO’s for complete mission investigations, such as this one, commercial aerospace and technology organizations have requested access to the names and addresses of those who submit NOI’s in order to facilitate informing potential proposers of their services and/or products. As an experiment and at the option of the submitters of a NOI, NASA OSS is willing to offer this information with the understanding that the Agency takes no responsibility for the use of such information. Therefore, all those submitting an NOI in response
to this AO are requested to include the appropriately edited form of the following material (Note: this material is included in the format of the NOI for those submitting electronically via the World Wide Web):

“By submitting this Notice of Intent to propose, I hereby do / do not authorize NASA to post my name and institutional address (but not the name of my intended proposal) as an addendum to this AO on the World Wide Web starting approximately one week after the NOI due date. If I do authorize such a posting, I understand that such information will be in the public domain, and I will not hold NASA responsible for any use made by others for revealing this information.”

A Notice of Intent must include the following:

(a) Name, address, telephone number, fax number, E-mail address, and institutional affiliation of the Principal Investigator (PI).

(b) Full names and institutional affiliations of each of the Co-Investigators (Co-I’s). If any Co-Investigators or other team members are from nondomestic institutions, the mechanism by which these people will be funded should be identified in the comments box on the form.

(c) Mission mode (Discovery Mission or Mission of Opportunity) and anticipated Launch Vehicle.

(d) A brief statement (150 words or less) for each of the following:

(1) The scientific objectives of the proposed mission.

(2) Identification of new technologies that may be employed as part of the mission.

(3) The Education/Public Outreach objectives in the proposed investigation.

In addition, to the extent the following information is known by April 30, 1998, the Notice of Intent should include the name of the Lead Representative from each organization (industrial, academic, nonprofit, and/or Federal) included in the team.

6.2 Format and Content of Proposals

General NASA guidance for proposals to this AO is given in Appendix A, which is considered binding unless specifically amended in this AO. A uniform proposal format is required from all proposers to aid in proposal evaluation. The required proposal format and contents are summarized in Appendix B. Failure to follow this outline may result in reduced ratings during the evaluation process and could lead to rejection of the proposal without review. General information and further proposal preparation information are provided as Appendices to this AO.
6.3 Submission Information

6.3.1 Certification

The original copy of all proposals shall include a Letter of Endorsement signed by an official from each institutional/industrial partner and each organization expecting to contribute hardware, software, facilities, services, etc. This official must certify institutional support and sponsorship of the investigation, as well as concurrence in the management and financial parts of the proposal. Non-U.S. organizations may submit such endorsements up to the date in the schedule in Section 1.3. Additional certifications identified in Appendix F are required by law and must be included with the original, signed proposal.

6.3.2 Cover Page and Proposal Summary

All proposers MUST submit electronically a combined Cover Page/Proposal Summary via the forms found at the World Wide Web site: <http://cass.jsc.nasa.gov/panel/>

See Appendix B for a listing of the information that will be required on these forms. Proposers without access to the Web or who experience technical difficulty accessing the Web site should contact the Lunar and Planetary Institute by E-mail at <discpanel@lpi.jsc.nasa.gov> or by phone at (281) 486-2156 or (281) 486-2166 for assistance.

Once the Cover Page/Proposal Summary has been submitted, the system will respond with a confirmation screen that provides a Confirmation Number to be used as an identifier for the proposal and also provides an opportunity for printing out the Cover Page/Proposal Summary. A hard-copy printout of the completed Cover Page/Proposal Summary containing the Confirmation Number MUST be used to secure the required original PI and institutional signatures; this printout then constitutes the first two pages of the submitted original proposal. (Note: This printed copy, with original signatures, is required for issuing awards in the event that the proposal is selected for funding.) In addition, copies of the signed Cover Page/Proposal Summary containing the Confirmation Number must be attached to the front of ALL the required number of proposal copies. Therefore, electronic submission of these pages must be sufficiently prior to the proposal deadline of June 29, 1998, to allow time to obtain the necessary signatures.

It is NASA’s intention that the PI’s name, institution, and Proposal Summary for all selected proposals will be posted on a publicly accessible site. Therefore, the Proposal Summary should not contain any proprietary or confidential information that the PI wishes to protect from public disclosure.

In addition to receiving a Confirmation Number after electronic submission, the proposer will receive a password unique to the proposal. To make any necessary changes to the information that was electronically submitted, the proposer must use this assigned password. After the proposal deadline, the password will be deactivated, and no further changes can be made.
Note: Electronic receipt of the Cover Page/Proposal Summary is NOT sufficient to meet the deadline for proposal submission. The original proposal, with the original signed Cover Page with Confirmation Number, the Proposal Summary, and the required number of copies of the proposal must be received at the address given in section 6.3.4 by June 29, 1998.

6.3.3 Quantity

All proposers must provide 35 copies of their proposal, including the original signed proposal, on or before the proposal deadline.

6.3.4 Submittal Address

All proposals must be received at the following address by June 29, 1998:

Discovery Science Peer Review Panel  
Lunar and Planetary Institute  
3600 Bay Area Boulevard  
Houston, TX 77058-1113  
Phone: (281) 486-2166 (for contact in case of commercial delivery service)

Additionally, one copy (over and above the 35 copies) of any proposal that includes any nondomestic participants, nondomestic letters of endorsement, and/or institutional and governmental commitments should be sent to Ms. Bettye Jones at the address listed below:

Ms. Bettye Jones  
Ref: Discovery Program 1998  
Space Science and Aeronautics Division  
Code IS  
National Aeronautics and Space Administration  
Washington, DC 20546-0001  
Phone: (202) 358-0900

6.3.5 Deadline

All proposals must be received at the address above by the closing date specified in Section 1.3. All proposals received after the closing date will be treated in accordance with NASA’s provisions for late proposals (see FAR Supplement 1815.412, Paragraphs a and b in Appendix E/DPL).

6.3.6 Notification of Receipt

NASA will notify the proposers that their proposals have been received. Proposers not receiving this confirmation within two weeks after submittal of their proposals should contact Mr. George Albright at the address given in Section 6.1.2.
7.0 Proposal Evaluation, Selection, and Implementation

7.1 Evaluation and Selection Process

All proposals will be subjected to a preliminary screening to determine their responsiveness to this AO. Proposals that are not in compliance with the constraints, requirements, and guidelines of this AO will be considered unacceptable and returned to the proposer. The remaining proposals will then be assessed by an evaluation team composed of panels of individuals who are peers of the proposers in scientific, technical, and other areas. The evaluations will be done in accordance with the criteria specified in Section 7.2.

After these evaluations, the panels will meet to consider the total qualitative and/or quantitative aspects of the evaluations to integrate the separate panel results, as necessary, to assure consistency and fairness in evaluations. Once these evaluations have been completed and integrated, an ad hoc Subcommittee of the Space Science Steering Committee (SScSC; see further below), composed entirely of Civil Servants who have served on the panels, will convene to consider the peer review results. This Committee will review all results and, based on this information, it will then categorize proposals in accordance with the category definitions in NASA FAR Supplement 1872.403, as follows:

- **Category I.** Well conceived and scientifically and technically sound investigations pertinent to the goals of the program and the AO’s objectives and offered by a competent investigator from an institution capable of supplying the necessary support to ensure that any essential flight hardware or other support can be delivered on time and that data can be properly reduced, analyzed, interpreted, and published in a reasonable time. Investigations in Category I are recommended for acceptance and normally will be displaced only by other Category I investigations.
- **Category II.** Well conceived and scientifically or technically sound investigations which are recommended for acceptance, but at a lower priority than Category I.
- **Category III.** Scientifically or technically sound investigations which require further development.
- **Category IV.** Proposed investigations which are recommended for rejection for the particular opportunity under consideration, whatever the reason.

The results of the evaluations and categorizations will be presented to the Space Science Steering Committee (SSSC), composed of Civil Service personnel appointed by the Associate Administrator for Space Science (OSS), for an independent review of the evaluation and categorization processes. After this review, the final evaluation results will be forwarded to the Associate Administrator, who will make the selection(s). Those proposers not selected will be notified by letter and will be offered a debriefing. Proposers selected will be notified by telephone and by letter, which will provide instructions concerning the steps necessary to finalize their contracts and conduct their concept studies.

The Associate Administrator for Space Science may use a wide range of planning and policy considerations when selecting among top proposals. Proposers should recognize that the Office of Space Science program planning is an evolving activity, dependent upon Administration
policies and budgets, as well as planetary exploration objectives and priorities that can change quickly with time. The Office of Space Science develops and evaluates the program strategy in consultation with the scientific community directly and via advisory groups such as NASA's Solar System Exploration Subcommittee (SSES), Origins Subcommittee (OS) and the National Academy of Sciences' Committee on Planetary and Lunar Exploration (COMPLEX).

7.2 Evaluation Criteria

Successful implementation of the Discovery Program requires, in addition to scientific merit, that the investigations be achievable within established boundary conditions of cost and schedule. The evaluation approach is designed to determine the mission with the best combination of quality of science, likelihood that the proposed science investigation can be achieved, low cost, and contribution to broader NASA and space science goals. To accomplish these objectives, Appendix B requests specific information that will be used to establish the scientific merit of the investigation, the feasibility of the science investigation, the feasibility of implementing the mission, the cost for each proposal, and the value of the contribution to broader NASA goals.

7.2.1 Evaluation Criteria for Proposals

The criteria that will be used to evaluate each proposal submitted in response to this AO are:

- The scientific merit of the investigation,
- The total cost to NASA,
- The technical merit and feasibility of the science investigation,
- The feasibility of the implementation scheme, and
- Education, Outreach, Technology (infusion and transfer), and Small Disadvantaged Business activities.

The scientific merit criterion will be given the greatest weight in the evaluation. The total mission cost to NASA will be given lower weight than scientific merit. The remaining three criteria will be given still lower, and approximately equal, weights.

7.2.1a Scientific Merit of the Investigation

The science information requested in the proposal will be used to evaluate each investigation for its scientific merit. To evaluate the intrinsic scientific merit, the investigation goals and objectives will be compared with the planetary system(s) science community's latest recommendations to determine the impact of the mission on science as a whole and, in particular, on the U.S. planetary system(s) science program (see goals in Section 2.1). This evaluation will include how well the mission fills important knowledge gaps or provides for fundamental progress in a subdiscipline, whether or not it provides ancillary benefits to science, and/or how well the mission may support or overlap ongoing missions. For Discovery Mission investigations, the scientific value of the Performance Floor (see Section 4.2) will also be assessed as part of the determination of the overall scientific merit of the investigation. This evaluation will result in
descriptive text as well as a numerical and/or adjectival score of the scientific merit of the investigation.

7.2.1b Total Cost to NASA

Although it will be weighted less than the scientific merit, the proposed total cost to NASA of the investigation will be a significant consideration in the evaluation of the proposals. As noted below, an assessment of the feasibility of completing the investigation within the estimated cost (i.e., realism of cost) will be part of the evaluation of feasibility of mission implementation.

7.2.1c Technical Merit and Feasibility of the Science Implementation

Each investigation will be evaluated for its technical merit, feasibility, resiliency, and the probability of success. Technical merit and feasibility will be evaluated by assessing the degree to which the investigation will address the proposed scientific goals and objectives and the degree to which the instrument set can provide the necessary data. The data analysis and archiving plan will be assessed; consideration of whether the data gathered will be sufficient to complete the scientific investigation will be a factor in this assessment. The timeliness of releasing the data to the public domain will be another factor. For Discovery Mission investigations, resiliency will be evaluated by assessing the approach to descoping the Baseline Mission to the Performance Floor in the event that development problems force reductions in scope. Finally, the probability of success will be evaluated by assessing the experience, expertise, and organizational structure of the science team and the technical risk associated with the mission design and the instrument set. This evaluation will result in a number and/or adjective score of the technical merit and feasibility of the scientific investigation.

7.2.1d Feasibility of the Mission Implementation Scheme

For all investigations submitted through this solicitation, the technical and management approaches will be evaluated to assess the likelihood that the investigation can be implemented as proposed. This will include an assessment of risk of completing the investigation within the proposed cost. The evaluation will consider implementation factors such as the proposed launch vehicle including reliability, mission design, spacecraft design, and design margins, and the proposers’ understanding of the processes, products, and activities required to accomplish development and integration of all elements (flight systems, ground and data systems, and etc.). It will also consider the adequacy of the proposed approach, the organizational structure, the roles and experience of the known partners, the management approach, the commitments of partners and contributors, and the team’s understanding of the scope of work (covering all elements of the mission, including contributions). The relationship of the work to the project schedule, the project element interdependencies, and associated schedule margins will also be evaluated. Investigations proposing new technology will be penalized for risk if adequate backup plans to ensure success of the mission are not described. The proposal must discuss the methods and rationale (cost models, cost estimating relationships of analogous missions, and etc.) used to develop the estimated cost, and must include a discussion of cost risks. Innovative cost effective features, processes, or approaches will be rewarded if proven sound.
It is recognized that teaming arrangements for implementing the mission may not be complete before the proposal closing date. Therefore, proposers will not be penalized if the proposal indicates only candidate (but credible) implementation approaches for the spacecraft, launch vehicle, communications, and ground systems that will allow successful implementation of the mission.

Since Mission of Opportunity investigations fly on non-NASA missions, factors involving spacecraft and launch vehicle capabilities will be considered in the evaluation only as appropriate.

Based on the items described above, each proposal will be evaluated as either high, medium, or low risk.

7.2.1e Education, Public Outreach, Technology, and Small Disadvantaged Business

The education, public outreach, technology, and small disadvantaged business activities described in the proposals will be rated by evaluating the degree to which they meet the program requirements in each of these areas. These requirements are described in Section 3.3.1. Appendix C provides additional information on education and public outreach.

7.3 Implementation Activities

7.3.1 Notification of Selection

Following selection, the PI’s of the selected investigations will be notified immediately by telephone, followed by formal written notification. The formal notification will include any issues noted during the evaluation that may require resolution, and any other special instructions for the concept study. Proposers of investigations that were not selected will be notified in writing and offered oral debriefings for themselves and a representative from each of their main partners (if any).

7.3.2 Contract Administration and Funding

Different mission management approaches and organizational arrangements will require different contract administration and funding arrangements. Each PI, in his or her proposal, is expected to recommend, as part of the teaming arrangement, the organizations and contract mechanisms NASA should use in awarding work to the team. Cost type contracts with incentives are strongly encouraged, particularly where performance incentives are measured based on delivery of calibrated/validated science data products. It is anticipated that contracts will be awarded for concept studies for the four to six missions selected as a result of this AO, with options for the follow-on mission phases (Phase A/B, Phase C/D, and Phase E).

NASA will provide approximately $375K to each selected Discovery Mission investigation and up to $250K for each Mission of Opportunity investigation to perform a four-month concept study, to be initiated as soon as possible after notification. The product of these studies will be reports to be delivered on the date specified in Section 1.3. The contents and format of the
concept study reports are specified in a document in the Discovery Program Library entitled *Guidelines For Concept Study Report Preparation* (See Appendix E/DPL). NASA may request presentations and/or site visits to review the concept study results with the investigation teams. The concept studies are intended to provide NASA with more definitive information regarding the cost, risk, and feasibility of the investigations before final selection(s) for implementation. As a result of evaluation of the concept studies, NASA expects to downselect to one or more investigations to proceed to Phase A/B by exercising contract options of the selected investigation(s). In no case, however, is NASA required to exercise any option.

7.3.3 *Downselection of Investigations*

The downselection decision will be made by the Associate Administrator for Space Science, based upon review of the concept study results and current programmatic considerations. The criteria presently being considered for evaluating the concept study are described in a document in the Discovery Program Library entitled *Concept Study Evaluation Criteria*. The scientific, technical, management, cost, and other aspects of the concept study will be assessed by a panel composed of individuals who are experts in each of the areas to be evaluated. The evaluation of the concept study for each investigation will be similar to the proposal evaluation, but will consider the additional detailed information provided. The evaluation will include a reexamination of the scientific merit of the investigation should any modifications be introduced as a result of the concept study, the total cost to NASA, the technical merit and feasibility of the science investigation, and the feasibility of implementing the mission. A complete assessment of the technical approach, the management, the Phase A/B plans, and the cost risk will be integrated to evaluate the probability that the implementation approach will support the science objectives. In addition, an evaluation of education, outreach, technology, and small disadvantaged business plans will be completed.

7.3.4 *Confirmation of Investigations for Subsequent Phases*

At the completion of the Phase A/B study (i.e., at the Preliminary Design Review), an independent review team will conduct a Confirmation Review. Based on the results of this review, the Associate Administrator for Space Science will decide whether or not to confirm the mission for design/development (Phase C/D). This decision will be based upon review of the Phase A/B results and programmatic considerations.

8.0 *Conclusion*

The Discovery Program continues to represent a challenging new way for NASA to accomplish important scientific exploration of planetary systems. It provides an opportunity for frequent flights to execute science investigations at the forefront of planetary system(s) science, as well as generate opportunities to enhance education initiatives and engage the public in the excitement of science discoveries. NASA invites both the U.S. and international science communities to participate in proposals for Discovery mission investigations and Mission of Opportunity investigations to be carried out as a result of this Announcement.
I. INSTRUMENTATION AND/OR GROUND EQUIPMENT

By submitting a proposal, the investigator and institution agree that NASA has the option to accept all or part of the offeror's plan to provide the instrumentation or ground support equipment required for the investigation, or NASA may furnish or obtain such instrumentation or equipment from any other source as determined by the selecting official. In addition, NASA reserves the right to require use of Government instrumentation or property that subsequently becomes available, with or without modification, that meets the investigative objectives.

NOTICE TO ALL OFFERORS: In the event that a Principal Investigator employed by NASA is selected under this Announcement of Opportunity (AO), NASA will award prime contracts to non-Government participants, including co-investigators, hardware fabricators, and service providers, who are named members of the proposing team, as long as the selecting official specifically designates the participant(s) in the selection decision. Refer to Section J of Appendix B of this AO for proposal information which the selecting official will review in determining whether to incorporate a non-Government participant in the selection decision. Each NASA contract with a team member selected in this manner will be supported by an appropriate justification for other than full and open competition, as necessary.

II. TENTATIVE SELECTIONS, PHASED DEVELOPMENT, PARTIAL SELECTIONS, AND PARTICIPATION WITH OTHERS

By submitting a proposal, the investigator and the organization agree that NASA has the option to make a tentative selection pending a successful feasibility or definition effort. NASA has the option to contract in phases for a proposed experiment, and to discontinue the investigative effort at the completion of any phase. NASA may desire to select only a portion of the proposed investigation and/or that the individual participates with other investigators in a joint investigation. In this case, the investigator will be given the opportunity to accept or decline such partial acceptance or participation with other investigators prior to a NASA selection. Where participation with other investigators as a team is agreed to, one of the team members will normally be designated as its leader or contact point. NASA reserves the right not to make an award or cancel this AO at any time.

III. SELECTION WITHOUT DISCUSSION

The Government intends to evaluate proposals and award contracts without discussions with offerors. Therefore, each initial offer should contain the offeror's best terms from a cost or price and technical standpoint. However, the Government reserves the right to conduct discussions, if later determined by the Contracting Officer to be necessary.
IV. NONDOMESTIC PROPOSALS

The guidelines for proposals originating outside of the United States are the same as those for proposals originating within the United States, except that the additional conditions described in Sections 3.7 shall also apply.

V. TREATMENT OF PROPOSAL DATA

It is NASA policy to use information contained in proposals and quotations for evaluation purposes only. While this policy does not require that the proposal or quotation bear a restrictive notice, offerors or quoters should, in order to maximize protection of trade secrets or other information that is commercial or financial and confidential or privileged, place the following notice on the title page of the proposal or quotation and specify the information, subject to the notice by inserting appropriate identification, such as page numbers, in the notice. In any event, information (data) contained in proposals and quotations will be protected to the extent permitted by law, but NASA assumes no liability for use and disclosure of information not made subject to the notice.

RESTRICTION ON USE AND DISCLOSURE OF PROPOSAL AND QUOTATION INFORMATION (DATA)

The information (data) contained in (insert page numbers or other identification) of this proposal or quotation constitutes a trade secret and/or information that is commercial or financial and confidential or privileged. It is furnished to the Government in confidence with the understanding that it will not, without permission of the offeror, be used or disclosed for other than evaluation purposes; provided, however, that in the event a contract is awarded on the basis of this proposal or quotation, the Government shall have the right to use and disclose this information (data) to the extent provided in the contract. This restriction does not limit the Government's right to use or disclose this information (data), if obtained from another source without restriction.

VI. STATUS OF COST PROPOSALS

Submission of a Standard Form (SF) 1411 Contract Pricing Proposal Cover Sheet for the Phase A Concept Study is not required. The SF 1411 is required for all contract options after the concept study. The investigator's institution agrees that the cost proposal submitted in response to the Announcement is for proposal evaluation and selection purposes, and that, following selection and during negotiations leading to a definitive contract, the institution may be required to resubmit or execute all certifications and representations required by law and regulation.

VII. LATE PROPOSALS

The Government reserves the right to consider proposals or modifications thereof received after the date indicated for such purpose, if the selecting official deems it to offer NASA a significant technical advantage or cost reduction. (See NFS 18-15.412.)
VIII. SOURCE OF SPACE INVESTIGATIONS

Investigators are advised that candidate investigations for space missions can come from many sources. These sources include those selected through the AO, those generated by NASA in-house research and development, and those derived from contracts and other agreements between NASA and external entities.

IX. DISCLOSURE OF PROPOSALS OUTSIDE THE GOVERNMENT

NASA may find it necessary to obtain proposal evaluation assistance outside the Government. Where NASA determines it is necessary to disclose a proposal outside the Government for evaluation purposes, arrangements will be made with the evaluator for appropriate handling of the proposal information. Therefore, by submitting a proposal, the investigator and institution agree that NASA may have the proposal evaluated outside the Government. If the investigator or institution desires to preclude NASA from using an outside evaluation, the investigator or institution should so indicate on the cover. However, notice is given that if NASA is precluded from using outside evaluation, it may be unable to consider the proposal.

X. EQUAL OPPORTUNITY

For any NASA contract resulting from this solicitation, the clause at FAR 52.222-26, Equal Opportunity, shall apply.

XI. PATENT RIGHTS

A. For any NASA contract resulting from this solicitation awarded to other than a small business firm or nonprofit organization, the clause at NFS 18-52.227-70, New Technology, shall apply. Such contractors may, in advance of a contract, request waiver of rights as set forth in the provision at NFS 18-52.227-71, Requests for Waiver of Rights to Inventions.

B. For any NASA contract resulting from this solicitation awarded to a small business firm or nonprofit organization, the clause at FAR 52.227-11, Patent Rights--Retention by the Contractor (Short Form) (as modified by NFS 18-52.227-11), shall apply.

XII. RIGHTS IN DATA

Any contract resulting from this solicitation will contain the Rights in Data - General clause: FAR 52.227-14.

XIII. SMALL AND SMALL DISADVANTAGED BUSINESS SUBCONTRACTING

A. Offerors are advised that, in keeping with Congressionally mandated goals, NASA seeks to place a fair portion of its contract dollars, where feasible, with small disadvantaged business concerns, women-owned small business concerns, Historically Black Colleges and Universities, and minority educational institutions, as these entities are defined in
52.219-8 and in 52.226-2 of the FAR. For this Announcement of Opportunity, NASA has established a recommended goal of 8 percent for the participation of these entities at the prime and subcontract level. This goal is stated as a percentage of the total contract value. NASA encourages all offerors to meet or exceed this goal to the maximum extent practicable and to encourage the development of minority businesses and institutions throughout the contract period. Offerors will be evaluated on the proposed goal for participation of the entities listed above in comparison with the 8 percent goal and on the methods for achieving the proposed goal.

B. Offerors are advised that for NASA contracts resulting from this solicitation which offer subcontracting possibilities, exceed $500,000, and are with organizations other than small business concerns, the clause FAR 52.219-9 shall apply. Offerors who are selected under this AO will be required to negotiate subcontracting plans which include subcontracting goals for small, small disadvantaged, and women-owned small business concerns. Note that these specific subcontracting goals differ from the 8 percent goal described in paragraph A above, and need not be submitted with the proposal. Failure to submit and negotiate a subcontracting plan after selection shall make the offeror ineligible for award of a contract.
The following guidelines apply to the preparation of proposals in response to this Discovery Mission investigations and Missions of Opportunity investigations AO. The material presented is a guide for the prospective proposer and is not intended to be all encompassing. The proposer should, however, provide information relative to those items applicable, as well as other items required by the AO. In the event of an apparent conflict between the guidelines in this Appendix and those contained within the body of the AO, those within the AO shall take precedence.

GENERAL GUIDELINES

All documents must be typewritten in English, use metric and standard astronomical units, and be clearly legible. Submission of proposal material by facsimile (fax), electronic media, videotape, or floppy disk (except as noted in Section I, below), is not acceptable. In evaluating proposals, NASA will only consider printed material in the submitted proposal. No proposal may reference a World Wide Web site for any data or material for completeness of the proposal.

The proposal must consist of only one volume, with readily identified sections corresponding to Sections C through J given below. Note the restrictions on page count for the various sections specified in the table on page B-2.

In order to allow for recycling of proposals after the review process, all proposals and copies must be submitted on plain white paper only (e.g., no cardboard stock or plastic covers, no colored paper, etc.). Photographs and color figures are permitted if printed on recyclable white paper only. The original signed copy (including cover page, certifications, and non-U.S. endorsements) should be bound in a manner that makes it easy to disassemble for reproduction. Except for the original, two-sided copies are preferred. Every side upon which printing appears will be counted against the page limits.

Proposals shall contain no more than 50 pages, with exclusions to the page count noted below, including no more than five fold out pages (28 x 43 cm; i.e., 11 x 17 inches). All pages other than fold out pages shall be 8.5 x 11 inches or A4 European standard.

Single- or double-column format is acceptable. In complying with the page limit, no page should contain more than 55 lines of text and the type font should not be smaller than 12-point (i.e., less than or equal to 15 characters per inch). Figure captions should be in 12 point. Smaller font is allowed within figures and in the cost table.
The following table provides guidance on page count within the proposal:

<table>
<thead>
<tr>
<th>Section</th>
<th>Page Limit</th>

</table>

The content of each proposal is described below. Note that the term “spacecraft” as used in this Appendix includes Space Shuttle carriers.

A. COVER PAGE

A cover page must be a part of the proposal, but will not be counted against the page limit. It must be signed by the Principal Investigator and an official by title of the investigator's organization who is authorized to commit the organization. The full names of the Principal Investigator and the authorizing official, their addresses with zip code, telephone and fax numbers, and electronic mail addresses, shall be included.

B. PROPOSAL SUMMARY

A summary of the proposed investigation must be included with the proposal. The Investigation Summary does not count against the page limit. The form to be used for this Summary is located at the World Wide Web site: <http://cass.jsc.nasa.gov>. Proposers without access to the Web or who experience difficulty accessing the Web site should contact the Lunar and Planetary Institute by E-mail at discpanel@lpi.jsc.nasa.gov or by phone at (281) 486-2156 or (281) 486-2166 for assistance. A hard copy printout of the completed Investigation Summary must be included with each copy of the proposal. It is NASA’s intent to enter the Summaries of all selected investigations for its various programs into a publicly accessible data base. Therefore, the Investigation Summary should not contain any proprietary or confidential information that the submitter wishes to protect from public disclosure.

C. TABLE OF CONTENTS

The proposal should contain a table of contents, which will not be counted against the page limit. This table of contents should parallel the outlines provided below in Sections E through J.
D. FACT SHEET

A Fact Sheet that provides a brief summary of the proposed investigation must be included in the proposal. The information conveyed on the Fact Sheet should include the following: science objectives (including the importance of the science to the NASA science themes), education and outreach and technology objectives, mission overview (including mission objectives and major mission characteristics), science payload, key spacecraft characteristics, anticipated launch vehicle, mission management (including teaming arrangement as known), schedule, and cost estimate. Other relevant information, including figures or drawings, may be included at the proposer’s discretion. The Fact Sheet is restricted to two pages (preferably a double-sided single sheet).

E. SCIENCE INVESTIGATION

The Science Investigation section should describe the scientific objectives of the proposed investigation, including the value of the investigation to the space science themes. The primary science theme to which the investigation applies should be identified. A discussion of the scientific products and how the science products and data obtained will be used to fulfill the scientific objectives should be provided. A discussion of how the science data will be obtained, including a plan for delivery of the products, and the individuals responsible for the data delivery, should also be provided.

1. Scientific Goals and Objectives. This section should consist of a discussion of the goals and objectives of the investigation; their value to the primary and any secondary science themes; and their relationships to past, current, and future investigations and missions. It should describe the history and basis for the proposal and discuss the need for such an investigation. An overview of the mission should be provided.

The measurements to be taken in the course of the mission, the data to be returned, and the approach that will be taken in analyzing the data to achieve the scientific objectives of the investigation should be discussed. This description should identify the investigation to be performed, the quality of the data to be returned (resolution, coverage, pointing accuracy, measurement precision, etc.), and the quantity of data to be returned (bits, images, etc.). The relationship between the data products generated and the scientific objectives should be explicitly described, as should the expected results. It is assumed that the above information will constitute the Baseline Mission.

This section must also identify a minimum acceptable data and scientific return for the mission (the Performance Floor), below which the mission would not be worth pursuing. The value of the Performance should be discussed. A description of the descope options available, their phasing, and their effect on meeting the scientific objectives of the mission, as the mission is descoped from the Baseline to the Performance Floor should be discussed. Proposals should include only one Baseline mission and one Performance Floor.
2. **Science Implementation.**

a. **Instrumentation.** This section should describe the instrumentation and the criteria used for its selection. It should identify the individual instruments and instrument systems, including their characteristics and requirements. It should indicate items that are proposed to be developed, as well as any existing instrumentation or design/flight heritage.

A preliminary description of each instrument design with a block diagram showing the instrument systems and their interfaces should be included, along with a description of the estimated performance of the instrument. Performance characteristics should be related to the measurement and investigation objectives as stated in the proposal. Such characteristics include a discussion of the data rates, fields of view, resolution, precision/sensitivity, pointing accuracy, etc.

b. **Mission.** Mission observing strategy and spacecraft performance required for obtaining the necessary data with the proposed instrumentation must be described. The concept for operating the mission and the requirements for mission operations must be given.

c. **Data Analysis and Archiving.** The data reduction and analysis plan, after the data have been delivered to the ground, should be discussed, including the method and format of the data reduction, data validation, and preliminary analysis. The process by which data will be prepared for archiving should be discussed, including a list of the specific data products and the individual team members responsible for the data products. The plan must include a detailed schedule for the submission of raw and reduced data to the appropriate data archive in the proper formats, media, etc. Delivery of the data to the data archive must take place in the shortest time possible.

d. **Science Team.** This section must identify the investigation science team and their roles and responsibilities. The capabilities and experience of all members of the proposed science team should be described. Resumes or curriculum vitae of team members should be included as attachments to the proposal (see Section J, below). The role of each science team member in the investigation should be explicitly defined and justified.

F. **EDUCATION/ PUBLIC OUTREACH, NEW TECHNOLOGY, AND SMALL DISADVANTAGED BUSINESS PLAN**

The Education/Public Outreach (E/PO), new technology, and small disadvantaged business section shall provide a summary of the benefits offered by the mission beyond the scientific benefits. This plan should reflect the proposer’s commitment to achieving the goals of the OSS education and public outreach strategy as reflected in the Implementation Plan for that strategy, participation of small disadvantaged business, and the use of new technology in the implementation of the investigations. Further
information on the broad approach to education and outreach can be found in
Implementing the Office of Space Science (OSS) Education and Outreach Strategy (see
contents of the Discovery Program Library, Appendix E), while specific guidance on the
criteria to be used to judge the E/PO material can be found in Appendix C. Guidance on
the use of new technology in investigations can be found in the OSS Integrated
Technology Strategy in the Discovery Program Library.

G. MISSION IMPLEMENTATION

This section should provide a description of the mission, including mission design,
instrument accommodation, spacecraft, launch vehicle required, ground systems,
communications approach, and mission operations plan. Specific information should be
included that describes the unique requirements placed on these mission elements by the
science investigation. If the Space Shuttle is proposed as the launch vehicle, the proposal
must state whether the investigation is considered a primary or a secondary payload,
specify the target flight assignment, and provide justification for Shuttle use as required
by Public Law 101-611 (see the Discovery Space Shuttle Launch Opportunities
document in the Discovery Program Library/Appendix E).

As part of this section, describe the development approach that will assure mission
success. Include the following items to the degree they are known:

- Heritage and maturity of mission elements (spacecraft, ground systems, and mission
design, etc.);
- Approach to the use or nonuse of redundancy and other reliability measures;
- Requirements for burn-in of parts and total operating time required without failure
  prior to flight;
- Assembly, integration and test flows and integration and test approach;
- Environmental test philosophy (test flow and sequence, test margins and test
  durations)
- Product assurance activities;
- Systems engineering and trade studies;
- Potential risks to the proposed investigation and plans for mitigating those risks; and
- Technology development plans and back-up plans if technologies do not meet
development needs (new technology may be penalized for risk if adequate back-up
plans are not described to ensure success of the investigation).

It is recognized that teaming arrangements to implement the investigation may not be
complete at the time of the proposal. Proposers will not be penalized for this if it is
demonstrated that there are candidate implementation approaches for the spacecraft,
launch vehicle, communications, and ground systems that will allow the successful
implementation of the investigation within the proposed cost and schedule.

In addition to the information above, the specific data identified below should be provided
(in tables) as known and as applicable to the mission configuration proposed.

B-5
1. **General information.**
   Launch date (including launch date flexibility), mission duration, orbit type (Earth orbit, heliocentric, etc.), orbit parameters (semimajor axis, eccentricity, inclination, node time of day, argument of perigee, altitude).

2. **Downlink Information.**
   Data rate and volume (kbps, Mbytes/day,), bit error rate, onboard storage (Mbytes), power available for communications (watts), number of data dumps per day, spacecraft data destination (e.g., mission operations center), science data destination (e.g., science operations center), and maximum time lag between data dump and data arrival at destination if relevant to science needs.

3. **Uplink Information.**
   Number of uplinks per day, number of Bytes per uplink, bit error rate, and approach and schedule for obtaining license(s) for use of proposed frequency bands.

4. **Resources and Margins.**
   For satellite (instrument package and spacecraft), provide estimates for mass, power, and reserves at the subsystem level (including propellant), and margins at the system level. For instrument package requirements on the spacecraft, provide pointing, stability, attitude, and maneuvering requirements necessary for science operations (include design margins, when known).

   **Definitions:**

<table>
<thead>
<tr>
<th><strong>Contingency (or reserve)</strong></th>
<th>When added to a resource, results in the maximum expected value for that resource. Percent contingency is the value of the contingency divided by the value of the resource less the contingency.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Margin</strong></td>
<td>The difference between the maximum possible value of a resource (the physical limit or the agreed-to limit) and the maximum expected value for a resource. Percent margin for a resource is the available margin divided by its maximum expected value.</td>
</tr>
</tbody>
</table>

   **Example:** A payload in the design phase has an estimated mass of 115 kg including a mass reserve of 15 kg. There is no other payload on the ELV and the ELV provider plans to allot the full capability of the vehicle, if needed. The ELV capability is 200 kg. The mass reserve is 15/100 = 15%, and the mass margin is 85 kg or 85/115 = 74%.

   **Example:** The end-of-mission life capability of a spacecraft power system is 200 Watts. The proposed instrument is expected to use 40 Watts, and a 25% contingency is planned. 75 Watts is allotted by the satellite provider. The reserve is 10 Watts while the margin is 25 watts, or 25/50 = 50%.

5. **Attitude and Control Requirements**

   - Control method (3-axis, spinner, gravity gradient, etc.)
   - Control reference (solar, inertial, Earth-nadir, Earth-limb, etc.)
• Attitude control requirements for bias, drift, stability or jitter, and rate for scanning (each axis)
• Spacecraft attitude knowledge requirements at the instrument interface for bias, drift, jitter, and rate for scanning (each axis)
• Agility (maneuvers, scanning, etc.)
• Deployments (solar panel, antennas, etc.)
• Articulation (1- or 2-axis solar arrays, antennas, gimbals, etc.)
• On-orbit calibration (alignment, line-of-sight, thermal deformation)
• Attitude knowledge processing (e.g. real-time versus postprocessing, spaceborne versus ground)

6. Instrument Characteristics
• Bias, drift, and noise of instrument data used in pointing control and knowledge determination.
• Character of significant instrument-generated jitter and momentum.

7. Spacecraft Characteristics
• Number, type and redundancy of the attitude and control system sensors and actuators.
• A block diagram of the spacecraft system components.

For Missions of Opportunity, provide the information above that is related to the proposed investigation’s requirements on and interfaces with the sponsor’s instrument/spacecraft.

H. MANAGEMENT AND SCHEDULE

This section should summarize the investigator’s proposed management approach. The management organization (including an organization chart) and decision-making process should be described, and the teaming arrangement (as known) should be discussed. The responsibilities of team members, including contributors, and institutional commitments should be discussed. Unique capabilities that each team member organization brings to the team, as well as previous experience with similar systems and equipment, should be addressed. The specific roles and responsibilities of the Principal Investigator and Project Manager must be described, but key project personnel (e.g., the Project Manager) need not be identified by name at this time. Risk management and risk mitigation plans must be described. This discussion should include the top 3-5 risks, descoping strategies, if relevant, and management strategies for control, allocation and release of technical, cost and schedule reserves and margins. When contracts are required, the acquisition strategy including the incentive strategy should be described.

A project schedule to meet the proposed launch date and covering all phases of the investigation should be provided. The schedule should include, as a minimum, proposed major project review dates; instrument development; spacecraft development; instrument-
to-spacecraft integration and test; launch vehicle integration; and mission operations and data analysis. Schedule reserve should be clearly identified.

Mission of Opportunity proposals should specifically address how the investigation team will interrelate with the sponsoring organization, organizationally and managerially. Mission of Opportunity proposals should also address:

- The status of the commitment from the spacecraft builder/owner or sponsoring organization to fly the proposed instrument or conduct the proposed investigation.
- Describe if and how the proposed investigation relates to the spacecraft sponsor’s overall mission objectives.
- Describe the investigation development plan and how it fits in the development plan for the sponsor’s mission.
- Describe how the operations plan for the proposed investigation fits within the mission of the sponsoring organization.

I. COST AND COST ESTIMATING METHODOLOGY

This section shall include an estimated cost of the investigation that encompasses all proposed activities, including all applicable mission phases, launch services, development of the ground data system, fee, and contributions. These costs shall be consistent with the program requirements described in Section 3, 4, and 5 of the AO. The amount required in each fiscal year should be identified by providing the data in Table B1 (see below, at end of this appendix) for Discovery missions and Table B2 for Missions of Opportunity, which will not be counted against the page limit. The top portion of Table B1 and B2 requests cost data relative to the NASA Cost. The lower portion addresses contributions. Table B3 gives the NASA inflation index to be used to calculate real year dollars. Note that if the Shuttle is proposed as the launch vehicle, a Shuttle transportation cost which is based upon payload weight/volume must be obtained from the Shuttle Office at NASA Headquarters and included in launch services costs (see Discovery Shuttle Shuttle Launch Opportunities document in the Discovery Program Library). This cost will be used for evaluation cost comparison purposes only.

Proposers are also requested to submit the data in Table B1 or B2, as appropriate, on a floppy disk with their original, signed proposal. The disk may be either IBM-compatible or Macintosh-compatible and the cost data, including the headings for the rows and columns, should be in tab-delimited text files. The disk should be labeled with the title of the proposal and the PI’s name.

The methodology used to estimate the cost, for example, specific cost model, past performance, cost estimating relationships from analogous missions, should be discussed. Budget reserve strategy, including budget reserve levels as a function of mission phase,
should be discussed. Please provide assumptions used in developing cost estimates to help facilitate reviewer understanding of proposed cost estimates.

J. APPENDICES

The following additional information is required to be supplied with the proposal as Appendices and, as such, will not be counted within the specified page limit. NO OTHER APPENDICES ARE PERMITTED.

1. Statement of Work (SOW) and Funding Information. For investigations managed from non-Government institutions, provide a SOW. For investigations managed from Government institutions, provide a SOW as if the institution were non-Government. This SOW must include the requirement for a Phase A concept study report that is described in the Guidelines for Concept Study Report document available through the Discovery Program Library. The SOW must include general tasks statements for Phases B/C/D and for Phase E for Discovery Mission investigations and Missions of Opportunity investigations. All SOW’s should include the following as a minimum: Scope of Work, Deliverables (including science data), and Government Responsibilities (as applicable). SOW’s need not be more than a few pages in length. If more than one contractual arrangement between NASA and the proposing team is required, funding information must be provided which identifies how funds are to be allocated among the organizations.

2. Letters of Endorsement. Letters of endorsement must be provided from all organizations offering goods and/or services on a no-exchange-of-funds basis, non-U.S. organizations providing hardware or software to the investigation, and the Launch Service provider if the launch service is not provided through a NASA contract. Letters of endorsement should be signed by institutional and/or Government officials authorized to commit their organizations to participation in the proposed investigation.

3. Resumes. Provide resumes or curriculum vitae for all science team members identified in the science section and for key project personnel. The resume should clearly show experience related to the job the individual will perform on the proposed investigation. Resumes or curriculum vitae should be no longer than one page in length for each participant.

4. NASA Principal Investigator Proposing Teams. Proposals submitted by NASA employees as Principal Investigators should contain the following information concerning the process by which non-Government participants were included in the proposal. The proposal should (i) indicate that the supplies or services of the proposed non-Government participant(s) are available under an existing NASA contract; (ii) make it clear that the capabilities, products, or services of these participant(s) are sufficiently unique to justify a sole source acquisition; or (iii) describe the open process that was used for selecting proposed team members. While a formal solicitation is not required, the process cited in (iii) above should include at
least the following competitive aspects: notice of the opportunity to participate to potential sources; submissions from and/or discussions with potential sources; and objective criteria for selecting team members among interested sources. The proposal should address how the selection of the proposed team members followed the objective criteria and is reasonable from both a technical and cost standpoint. The proposal should also include a representation that the Principal Investigator has examined his/her financial interests in or concerning the proposed team members and has determined that no personal conflict of interest exists. The proposal must provide a certification by a NASA official superior to the Principal Investigator verifying the process for selecting contractors as proposed team members, including the absence of conflicts of interest.

The following information may be provided.

1. **References List.** Proposals may provide, as an appendix, a list of reference documents and materials used in the proposal. The documents and materials themselves cannot be submitted, except as a part of the proposal and included within the prescribed page count.

2. **Acronyms List.**

Use an inflation rate of 3.9% for years beyond 2005.
Education and Public Outreach (E/PO) Plan Evaluation Criteria

In order to ensure that the goals and objectives of the OSS E/PO strategy are realized in practice, proposals will be evaluated using the following specific criteria:

- The establishment of effective, long-duration partnerships with institutions and/or personnel in the fields of educational and/or public outreach as the basis for and an integral element of the proposed E/PO program;
- The potential of the proposed E/PO activity to have a “multiplier effect” (e.g., prospects for broad dissemination or replication of an E/PO product);
- For proposals dealing with the formal education system, the degree to which the proposed E/PO effort promotes nationally recognized and endorsed education reform efforts and/or reform efforts at the state or local levels;
- The degree to which the proposed E/PO effort contributes to the training of, involvement in, and broad understanding of science and technology by underserved and/or underutilized groups; and
- The prospects for building on, taking advantage of, and leveraging existing and/or ancillary resources beyond those directly requested in the proposal;

It is recognized that not all proposals can (or even should) address all of these factors and only the relevant subset will be considered in evaluating each individual proposal. In addition, the following general criteria also will be considered in evaluating all proposals:

- The quality, scope, and realism of the proposed E/PO program;
- The capability and commitment of the proposer to carry out the proposed E/PO program;
- The adequacy of plans for evaluating the effectiveness and impact of the proposed education/outreach activity;
- The linkage of the proposed E/PO task with existing NASA science and/or education programs and activities; and
- The adequacy and realism of the proposed budget (including any additional resources outside those requested from NASA).

Note that originality of the proposed effort is not a criterion. Rather, NASA OSS seeks assurance that the PI is committed to carrying out a meaningful, effective, credible, and appropriate E/PO activity; that such an activity has been planned and will be executed; and that the proposed investment of resources will make a significant contribution toward meeting OSS education/outreach goals and objectives. Additional guidance is contained in the OSS E/PO strategy and implementation plans referenced in section 3.3.1.
The E/PO component of proposals will be evaluated by appropriate scientific and professional Education and Public Outreach personnel, and the results of that evaluation will be factored into the overall evaluation of the proposal and the selection process as outlined in Section 7.

**Education and Public Outreach Proposal Assistance**

To directly aid space science personnel in identifying and developing high quality E/PO opportunities and establishing partnerships between the space science and E/PO communities, NASA OSS has established a national space science education/outreach infrastructure. The purpose of this infrastructure is to provide the coordination, background, linkages, and services needed for a vital national, coordinated, long-term E/PO program.

Of particular interest to proposers to the AO are two elements of this system (which is described in more detail in the OSS education/outreach implementation plan referred to earlier):

(i) Four OSS science theme oriented “E/PO Forums” have been established to help orchestrate and organize in a comprehensive way the education/outreach aspects of OSS space science missions and research programs and provide ready access to relevant E/PO programs and products to both the space science and education communities.

(ii) Five regional E/PO “broker” Facilitators” have also been selected to search out and establish high leverage opportunities, arrange alliances between educators and OSS-supported scientists, and help scientists turn results from space science missions and programs into educationally-appropriate activities to be disseminated regionally and nationally.

Prospective proposers are strongly encouraged to make use of these infrastructures resources to help identify suitable E/PO opportunities and arrange appropriate alliances. Points of contact and addresses for all of these E/PO Forums and Broker/Facilitators may be found by opening *Education and Public Outreach* from the menu of the OSS homepage at <http://www.hq.nasa.gov/office/oss/>
The following Federal Acquisition Regulation (FAR) clauses cover the purchase of foreign goods and services and may be included in contracts resulting from this Announcement of Opportunity:

52.225-3 Buy American Act -- Supplies (January 1994)

52.225-7 Balance of Payments Program (April 1984)

52.225-9 Buy American Act -- Trade Agreements -- Balance of Payments Program (January 1994)

52.225-10 Duty-Free Entry (April 1984)

52.225-11 Restrictions on Certain Foreign Purchases (May 1992)

52.225-18 European Community Sanction for End Products (May 1995)

52.225-19 European Community Sanction for Services (May 1995)

The proposer is directed to the Federal Acquisition Regulations and the NASA FAR Supplements for further information on these regulations.
The Discovery Program Library includes documents available electronically via the Internet, as well as paper copy. Proposers are requested to access the document electronically where possible. Only limited paper copies of some documents are available, therefore, requests for copies must be approved by NASA Headquarters. Please note that not all documents are available via the Discovery Program Library, but access information is provided.

**It is incumbent upon the proposer to ensure that the documents used in proposal preparation are of the date and revision listed in the Announcement of Opportunity or this Appendix.**

The Discovery Program Library is accessible on the World Wide Web at the URL address:

http://discovery.larc.nasa.gov/discovery/dpl.html

Requests for paper copies must be submitted in writing to either of the below addresses:

The Space Science Enterprise Strategic Plan: Origins, Evolution, and Destiny of the Cosmos and Life (November 1997)
This document is a concise statement of the goals and outlook of NASA’s Space Science Enterprise. It is a compilation of the major ideas described in more detail in the context of the overall NASA Strategic Plan.

Partners in Education: A Strategy for Integrating Education and Public Outreach into NASA’s Space Science Programs (March 1995)
This document describes the overall strategy for integrating education and public outreach into NASA’s space science programs.

Implementing the Office of Space Science (OSS) Education/Public Outreach Strategy (October 1996)
This document describes OSS’s overall approach to implementing its Education/Public Outreach strategy.

Office of Space Science Integrated Technology Strategy (April 1994)
Describes efforts to manage technology infusion into future OSS missions and to promote technology transfer to the private sector.

Space Science Roadmaps

The science themes of the NASA Office of Space Science, through the Space Science Advisory Committee and its subcommittees, have developed Roadmaps. These planning documents prioritize the space science goals for NASA for the years 2000-2020. The following Roadmaps apply to the Discovery Program:

Search for Origins Roadmap (April 1997)
A paper copy may be obtained by sending an E-mail with name and address to <hthronson@hq.nasa.gov>.

Space Science Supporting Documents

Report of the HST and Beyond Committee.

Exploration of Neighboring Planetary Systems (ExNPS) Study (August 1996)
Jet Propulsion Laboratory report. Mission and technology road map and presentation to the Townes Blue Ribbon Panel.

Discovery Guidelines and Requirements Documents

Describes the functions and costs of Ground Data Systems and Mission Operations and Data Analysis available via NASA.

Discovery Launch Services Information Summary
Provides information on capabilities and costs of launch services that are available to launch Discovery spacecraft selected pursuit to this AO.

Discovery Space Shuttle Launch Opportunities
Provides information on capabilities and costs of launch services that are available to Discovery spacecraft that utilize this option of this AO.

Navigation and Ancillary Information Facility Services for Discovery Missions
Provides information relative to the NASA Ancilliary Information Facility and the SPICE capability for mission design, mission planning, observation planning, and interpretation of scientific observations.

Guidelines for Concept Study Report Preparation
Provides proposers who are selected via the AO guidelines for preparations of the Concept Study Report.

Concept Study Evaluation Criteria
 Defines the criteria and weighting by which the Concept Study Report will be evaluated.

Cost Element Definitions
Provides definitions for all major cost elements for proposals and concept study reports.

General Guideline and Requirements Documents

Example of International Agreement
Example of an Agency to Agency agreement for International cooperation.

Example Mission Definition and Requirements Agreement
Example of such an agreement.

NHB 7120.5 -- Management of Major System Programs and Projects (November 1993)
This NASA Handbook provides a reference for typical activities, milestones, and products in the development and execution of NASA missions.
ISO 9000 Series

CERTIFICATION REGARDING LOBBYING

As required by S 1352 Title 31 of the U.S. Code for persons entering into a grant or cooperative agreement over $100,000, the applicant certifies that:

(a) No Federal appropriated funds have been paid or will be paid by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, in connection with making of any Federal grant, the entering into of any cooperative, and the extension, continuation, renewal, amendment, or modification of any Federal grant or cooperative agreement;

(b) If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting an officer or employee of any agency, Member of Congress, or an employee of a Member of Congress in connection with this Federal grant or cooperative agreement, the undersigned shall complete Standard Form - LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.

(c) The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subgrants, contracts under grants and cooperative agreements, and subcontracts), and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by S1352, title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

This certification is required by the regulations implementing Executive Order 12549, Debarment and Suspension, 14 CFR Part 1265. The regulations were published as Part VII of the May 28, 1988 Federal Register (pages 19160–19211). Copies of the regulations may be obtained by contacting the U.S. Department of Education, Grants and Contracts Service, 400 Maryland Avenue, S.W. (Room 3633 GSA Regional Office Building No. 3), Washington, D.C. 20202-4725, telephone (202) 732-2505.

A. The applicant certifies that it and its principals:

(a) Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency;

(b) Have not within a three-year period preceding this application been convicted or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State, or Local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;

(c) Are not presently indicted for or otherwise criminally or civilly charged by a government entity (Federal, State, or Local) with commission of any of the offenses enumerated in paragraph A.(b) of this certification;

(d) Have not within a three-year period preceding this application/proposal had one or more public transactions (Federal, State, or Local) terminated for cause or default; and

B. Where the applicant is unable to certify to any of the statements in this certification, he or she shall attach an explanation to this application.

C. Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lowered Tier Covered Transactions (Subgrants or Subcontracts)

(a) The prospective lower tier participant certifies, by submission of this proposal, that neither it nor its principles is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any federal department of agency.

(b) Where the prospective lower tier participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

Certification of Compliance with the NASA Regulations Pursuant to Nondiscrimination in Federally Assisted Programs

The (Institution, corporation, firm, or other organization on whose behalf this assurance is signed, hereinafter called "Applicant ") hereby agrees that it will comply with Title VI of the Civil Rights Act of 1964 (P.L. 88-352), Title IX of the Education Amendments of 1962 (20 U.S.C. 1680 et seq.), Section 504 of the Rehabilitation Act of 1973, as amended (29 U.S.C. 794), and the Age Discrimination Act of 1975 (42 U.S.C. 16101 et seq.), and all requirements imposed by or pursuant to the Regulation of the National Aeronautics and Space Administration (14 CFR Part 1250) (hereinafter called "NASA") issued pursuant to these laws, to the end that in accordance with these laws and regulations, no person in the United States shall, on the basis of race, color, national origin, sex, handicapped condition, or age be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under any program or activity for which the Applicant receives federal financial assistance from NASA; and hereby give assurance that it will immediately take any measure necessary to effectuate this agreement.

If any real property or structure thereon is provided or improved with the aid of federal financial assistance extended to the Applicant by NASA, this assurance shall obligate the Applicant, or in the case of any transfer of such property, any transferee, for the period during which the real property or structure is used for a purpose for which the federal financial assistance is extended or for another purpose involving the provision of similar services or benefits. If any personal property is so provided, this assurance shall obligate the Applicant for the period during which the federal financial assistance is extended to it by NASA.

This assurance is given in consideration of and for the purpose of obtaining any and all federal grants, loans, contracts, property, discounts, or other federal financial assistance extended after the date hereof to the Applicant by NASA, including installment payments after such date on account of applications for federal financial assistance which were approved before such date. The Applicant recognized and agrees that such federal financial assistance will be extended in reliance on the representations and agreements made in this assurance, and that the United States shall have the right to seek judicial enforcement of this assurance. This assurance is binding on the Applicant, its successors, transferees, and assignees, and the person or persons whose signatures appear below are authorized to sign on behalf of the Applicant.

NASA FORM 1206
The Discovery Program funding profile for future missions is subject to a wide variety of pressures. For planning purposes, the five (5) year forecast of NASA funding for mission number seven is provided in the table below (in Real Year Million Dollars). These levels represent the highest level acceptable for the years FY 1999-2001, but unused portions of earlier funds can be used in the next year if necessary. In addition, these levels represent the total available to Discovery missions for all costs to NASA, including launch vehicle costs as provided in Discovery Launch Services Information Summary document located in the Discovery Program Library (see Appendix E).

The NASA forecast for specific budgets beyond the year 2003 are not yet available. The NASA budget for years beyond the year 2003 should be sufficient to cover any funding requirements necessary for missions proposed to this AO. Consequently, Discovery missions do not need to consider yearly funding limitations for FY 2004 and out.
